

BARBER RANCH

Annual Bull Sale

WEDNESDAY, NOVEMBER 13, 2019

11 a.m. CST
Jordan Cattle Auction
San Saba, Texas

159 Head Sell

87 Registered Hereford Bulls
...Horned & Polled

20 Registered Hereford Heifers

52 Express Ranches
Registered Angus Bulls

lot 3

Fellow Cattlemen:

Everyone at Barber Ranch can't wait to show you our 2019 sale offering!

This is a family operation. There are several of us involved, and we all have our favorites, but everyone agrees that this is the year for a lot of exceptional cattle. There are ET calves from our best donors and our best sires—plus non-owned breed-leading AI sires that offer fresh genetics to punch up our program as well as give our customers a wider choice. Possibly the most exciting group is the calves out of our first-calf heifers. This is the future. These cattle allow you to get a jump-start on brand new, cutting-edge genetics. Our two-time Denver Supreme Champion Hereford, Belle Air, was a heifer's first calf; several of his progeny sell.

This year we are offering calving ease/low birth weight bulls *IN VOLUME*, for the first time ever. We try our best to produce what you, our customers, have asked for. There are some homozygous polled bulls and several goggle-eyed ones too. We still have plenty that are super stout boned, heavy muscled and powerful. In compiling this catalog, we have all been astonished at the incredible performance EPDs this set has—both bulls and heifers.

We love looking at good cattle. Our program has always strived to add more look along with more muscle, deeper rib, stouter bone and more all-around performance. Udder quality, calving ease, carcass traits and pigment have moved to the forefront in today's breeding choices.

Our bulls are developed in large, mostly native grass pastures with limited supplemental feed. They are lot numbered in sale order. There are many potential herd sire prospects all through the sale order—they can't all be Lot 1.

This sale offers you second-to-none, one-stop shopping, as we are again honored to offer Angus bulls from Express Ranches, the nation's largest seedstock producer. Nationally known for sound, fertile, problem-free cattle, Express Ranches offers proven, performance-based genetics with exceptional customer service that has set the standard of excellence for the Angus breed.

We encourage you to invest with confidence, knowing that your purchases are backed by 100% satisfaction guaranteed. With the opportunity to buy from two of the most prominent US breeding programs in one place, there is not a better time to strengthen your herd. *Selecting high performing, efficient bulls to sire your next calf crop is an important economic decision that YOU can control.*

Come early and enjoy Texas Hill Country hospitality Tuesday evening before the sale. To our past and future customers, partners and all the families and ranch hands who make this possible, THANK YOU and WELCOME to this year's sale. We look forward to seeing you in San Saba!

THE DALE BARBER FAMILY

(806) 319-4253 • ashleighmimms@hotmail.com

"SIGHT-UNSEEN GUARANTEE"

To make buying easy, we offer a sight-unseen guarantee. Leave a bid...buy over the phone...buy through Superior. If they don't meet your approval, they come home. It's that simple.

Cattle will sell in catalog lot order, with the exception that the Angus bulls will sell following the Hereford bulls and before the Hereford heifers.

Please join us for a pre-sale social and dinner at 6 p.m., Tuesday, November 12th, at Jordan Cattle Auction.

View the videos online: barberranch.com

SALE TERMS & CONDITIONS

TERMS: Cash or check. Cattle will be sold to the highest bidder. The auctioneer shall settle any disputes as to bids. All cattle are to be paid for by the purchaser during or immediately following the sale and will not be released until after settlement has been made. Each animal will be at the purchaser's risk immediately after it is sold.

HEALTH: The health of the cattle selling is excellent. Each animal will be accompanied by an individual health certificate for immediate interstate shipment.

GUARANTEE: Each registered animal will sell under the Suggested Terms and Conditions of its respective breed registry, either the American Hereford Association or the American Angus Association.

BREEDING GUARANTEE: Bulls sold in this sale are fertility tested and are guaranteed by the owners to be breeders, provided they are properly handled and cared for by the purchaser. Any bull failing to breed after a trial of six months may be returned to the seller *if in good condition*. The seller reserves the right to try said bull for six months, and if it proves a breeder to return him to the buyer at buyer's expense. If the bull proves a non-breeder, the bull will be replaced, or credit will be issued for the next year's sale at the purchase price minus salvage value of the bull. Seller is not liable for bulls lost due to injury or death.

ANNOUNCEMENTS: Announcements made sale day from the auction block will take precedence over statements in the catalog or other advertising. We reserve the right to withdraw any sale lot not meeting our specifications prior to sale time.

LIABILITY: All persons who attend the sale do so at their own risk. Neither the owners, Jordan Cattle Auction nor any other persons connected with the sale assume liability, legal or otherwise, for accidents or loss of property.

The sale cattle will be at Jordan Cattle Auction beginning Tuesday, November 12th.

Prior to Tuesday, you are invited to stop by either of the ranches to take a look.

Barber Ranch reserves the right to collect, freeze and use semen within their own herd on any Hereford bull sold in this sale.

Semen collection would be done at Barber Ranch's expense and the buyer's convenience.

Barber Ranch reserves all cloning rights on Lots 1-120.

ABSENTEE BIDDERS: HOW TO PARTICIPATE ON THE PHONE OR ONLINE

We have made preparations to bid and buy livestock through Superior Productions' "Call or Click-To-Bid" service for buyers unable to attend in person on sale day. Please note that all of the lots in the sale will also be available for viewing online prior to sale day at: www.superiorlivestock.com.

Here's How It Works...

Turn in Bids Over the Phone. This is our traditional method of buying livestock and is the suggested process for anyone who does not have excellent, high-speed internet. To get started, simply go online to www.superiorlivestock.com and click on the tab titled "Register for a Buyer Number." Select the registration form for Superior Productions and print the registration form. Fill it out and fax it in to Superior Productions at (817) 378-3380 with a signature on it. You can also mail it in to the address provided on the form. Upon receipt of this information, Superior will call you with a buyer's number and the bid line phone number that you will use on sale day to place bids over the phone.

Click-To-Bid. This is Superior's online bidding program for cattle buying. *Please note that high speed internet is required—this is not for dial-up or satellite internet.* Registration is free, but you must become a member of www.superiorclicktobid.com to sign up. Becoming a member is easy; just go to the home page of www.superiorclicktobid.com and follow the outlined steps to get started. Input your information and select a username and password. You will receive an e-mail confirming you are a member. From that point forward, you just have to sign in and select the sale you would like to register for and, once approved by the ranch, you will receive an e-mail confirming which sale you are now registered for.

Viewing the Auction. Sale will be broadcast via satellite on Dish Network channel 997. *Please note that there is a short delay if you are watching the auction on television, so be sure to call in a couple lots ahead of the lot you are interested in bidding on.* The sale will also be broadcast live on the internet at both www.superiorlivestock.com and www.superiorclicktobid.com. The video feed on the homepage of www.superiorlivestock.com looks the same as the video feed on TV and can be watched over a smartphone or tablet. Remember, you can call in to bid whether watching on the TV or on the internet, but you must be a member of www.superiorclicktobid.com to "click-to-bid."

Buyers will be contacted by the ranch after the sale for payment and delivery details.

IF YOU NEED ANY ASSISTANCE, CALL SUPERIOR: (800) 422-2117

Contact these Superior Livestock representatives to buy bulls or to sell calves sired by bulls purchased in this sale:

ALL BULLS IN THIS SALE QUALIFY FOR SUPERIOR PROGRESSIVE GENETICS

Superior Progressive Genetics (SPG) is a Value Added Program launched by Superior Livestock Auction to create a premium for commercial cattlemen when they sell calves on Superior by identifying load lots of cattle sired exclusively by bulls purchased directly from qualified seed stock producers. SPG brings attention to the investment commercial cattlemen have made by doing business with leading seed stock producers. Barber Ranch or Express Ranches and their bull buying customers will be recognized by branding the SPG icon and the Barber Ranch or Express Ranches logo on qualified load lots as the cattle sell on Superior's video sales live on television and the internet. In addition to the qualified lots being identified on television, the lots will also be branded as "SPG" in Superior Livestock Auction's print and web sale catalogs.

Additional Benefits to Commercial Cattlemen Selling on Superior:

- ✓ Doing business with a reputable company who has your best interest in mind.
- ✓ Superior ties the commercial and purebred cattle industry together full circle.
- ✓ Largest cattle auction in North America along with the largest active buyer list.
- ✓ Can sell on contract to take advantage of current market conditions and deliver at a later date.
- ✓ Established premiums for cattle on good health programs.
- ✓ Established premiums for many Value Added Programs.
- ✓ Cattle are sold "country fresh" direct from the ranch, resulting in less stress.
- ✓ Seller determines weighing conditions.
- ✓ Seller does not have the expense of trucking.
- ✓ Payment is guaranteed to sellers through Superior's bonded custodial account.

For more information, contact Superior at (800) 422-2117

or visit www.SuperiorLivestock.com.

Barber Ranch

Using EPDs as Selection Tools

Cattle Evaluations use the term Expected Progeny Difference (EPD) to express genetic transmitting ability of a sire for the various traits listed. An EPD is a prediction of how future progeny of a sire are expected to perform in a particular trait, relative to other sires in the analysis. The key word is "difference." The EPD itself does not imply "good" or "bad" performance; rather, the EPD gives a prediction of the average "difference" to expect in the performance of a sire's progeny relative to other sires in the same analysis.

The EPD for a given trait on each animal in the analysis is compared to every other animal in the analysis. The EPD is reported as a plus or minus value in the unit which the trait is measured. EPD accuracies on non-parent animals are relatively low and are not reported in this catalog. The American Hereford Association (AHA) measures 17 traits and calculates three profit (\$) indexes. A comprehensive sort of Hereford sires can also be done online at www.hereford.org.

Important: No across-breed EPD comparisons can be made.

Hereford EPDs and \$ Indexes included in our sale catalog are:

Calving Ease Direct (CED) Based on calving ease scores and birth weights and measured on a percentage. CED EPD indicates the influence of the sire on calving ease in females calving at two years of age. For example, if sire A has a CED EPD of 6 and sire B has a CED EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

Birth Weight EPD (BW) An indicator trait for calving ease, measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty.

Weaning Weight EPD (WW) An estimate of pre-weaning growth, measured in pounds.

Yearling Weight EPD (YW) An estimate of post-weaning growth, measured in pounds.

Scrotal Circumference EPD (SC) Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty.

Maternal Milk EPD (Milk) The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth EPD (M&G) Reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. It is equal to one-half the sire's weaning weight EPD, plus all of his Milk EPD.

Calving Ease Maternal (CEM) Predicts how easily a sire's daughters will calve at two years of age and measured on a percentage. For example, if sire A has a CEM EPD of 7 and sire B has a CEM EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Carcass EPDs

Carcass records are adjusted to an age constant endpoint. Therefore, selection based on any or all of the carcass merit EPD is comparable among cattle at the same age endpoint. For example, selection based on increased EPD for carcass weight will result in heavier carcass weights than those animals with lower EPD for carcass weights when the cattle are harvested at the same age.

Carcass Weight EPD (CW) Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight.

Ribeye Area EPD (REA) REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also

Hereford EPD Averages for 2017/2018 born calves as of 10/14/19:

CED	BW	WW	YW	SC	Milk	M&G	CEM	CW	REA	Marb	BMI\$	BI\$	CHBS
+1.9	+3.1	+51	+83	+0.9	+23	+49	+1.8	+64	+35	+0.7	+320	+385	+99

incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling Score (Marb) Marbling EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat (IMF) based on carcass measurements of harvested cattle. Breeding cattle with higher Marb EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

\$Profit Indexes

Baldy Maternal Index (BMI\$) The Baldy Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed toward Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake but a positive weighting on Carcass Weight, which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Ribeye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BI\$) The Brahman Influence Index is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed toward a commodity beef market, since Certified Hereford Beef does not accept Brahman-influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk, which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake but a positive weighting on Carcass Weight, which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Ribeye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers who use Hereford bulls on Brahman-influenced cows.

Certified Hereford Beef Index (CHBS) The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well, there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Ribeye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

EPDs are updated weekly by the American Hereford Association, so we cannot guarantee the EPDs listed in the catalog. The Hereford EPDs printed are from the 10/14/19 evaluation of the AHA. View up-to-date EPDs at www.hereford.org.

Genomic-Enhanced EPDs The accuracy of breeding values in young cattle is enhanced with DNA testing. EPDs that were genomically enhanced at catalog press time are indicated by this symbol.

Actual birth weight is included in addition to adjusted 205-day weaning weight and adjusted 365-day yearling weight. Note that several of the ET calves were produced through in-vitro fertilization (IVF), resulting in heavier birth weight because of the medium used in the IVF process.

Pigmentation for Left Eye and Right Eye are also included. Actual scrotal circumference measurements will be available sale day.

Each animal tested is recognized with the AHA GE-EPD logo.

AHA Trait	Accuracy Improvement	Effective Progeny Number Increase*
Calving Ease	0.09	17
Birth Weight	0.12	8
Weaning Weight	0.14	12
Yearling Weight	0.16	9
Scrotal Circumference	0.17	6
Mature Cow Weight	0.12	4
Udder Suspension	0.17	7
Teat Size	0.17	7
Carcass Weight	0.11	3
Fat	0.08	2
Rib-Eye Area	0.07	2
Marbling	0.10	3

* Effective Progeny Number Increase (EPNI)- EPNI is the difference gained for genotyped animals versus non-genotyped animals.

Stand out with Proven Genetics

THE HEREFORD ADVANTAGE PROGRAM

Increase added market power and brand recognition with feeder cattle sired by a Hereford bull battery ranking in the top 50% for CHB\$ index.

PROGRAM BENEFITS:

- ✓ EPD ranking summary
- ✓ Added market exposure
- ✓ Genetic improvement tool
- ✓ Access to AHA resources
- ✓ Get started at HerefordFeederCattle.com

Certified Hereford Beef Index(CHB\$) is a terminal sire index that is built on a production system where Hereford bulls are used on Angus-based cows with a focus on feedlot performance and end-product merit. To qualify for the Hereford Advantage program, cattle must be sired by registered Hereford bulls with transferred ownership, and the Hereford bull battery must have a CHB\$ value ranking in the top 50%.

Angus Bulls

lots 201-252

THE ANGUS BULLS WILL SELL IN LOT ORDER AFTER THE HERFORD BULLS, FOLLOWED BY THE HERFORD HEIFERS.

Angus pedigree notations: # Angus Pathfinder Sire or Dam • + Embryo Transplant

Angus EPDs were current 10/14/19. For up-to-date EPDs, visit the American Angus Association website: www.angus.org

American Angus Association Fall 2019 EPD Averages for Non-Parent Bulls:

The Angus bulls selling have Genomic Enhanced Expected Progeny Differences. EPDs that traditionally contained all pedigree, performance and progeny information now also include results from available genomic, or DNA, tests. Breeders who use genomic technology give buyers access to AGI-generated GE-EPDs that provide: increased predictability and decreased risk for young and unproven animals due to enhanced accuracy of EPDs; better characterization of genetics for difficult-to-measure performance traits (such as carcass traits, maternal traits and feed efficiency); the ability to make more rapid progress for traits that are important to you, due to more accurate selection, easier identification of genetic outliers and the ability to propagate young animals with confidence earlier in their lives. In fact, GE-EPDs on unproven animals have the same amount of accuracy as if they had recorded 8 to 33 calves, depending on the trait. That's valuable insight, offered regularly through the Angus breed's weekly national cattle evaluation at www.angus.org.

Calving Ease Direct (CED) is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Dry Matter Intake (DMI), expressed in pounds per day, is a predictor of difference in transmitting ability for feed intake during the postweaning phase, compared to that of other sires.

Scrotal Circumference EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Docility (Doc), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

Claw Set EPD (Claw) is expressed in units of claw-set score, with a lower EPD being more favorable, indicating a sire will produce progeny with more ideal claw set. The ideal claw set is toes that are symmetrical, even and appropriately spaced.

Foot Angle EPD (Angle) is expressed in units of foot-angle score, with a lower EPD being more favorable, indicating a sire will produce progeny with more ideal foot angle. The ideal is a 45-degree angle at the pastern joint with appropriate toe length and heel depth.

Heifer Pregnancy (HP) is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

Calving Ease Maternal (CEM) is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk EPD (Milk) is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Carcass Weight EPD (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb) is expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$Value Indexes An economic selection index allows multiple change in several different traits at once pertaining to a specific breeding objective. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if the sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), an index expressed in dollars per head, predicts profitability differences from conception to weaning, with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. The model assumes commercial producers will replace 25% of their breeding females in the first generation and 20% of their breeding females in each subsequent generation. Traits included are as follows: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

Weaned Calf Value (\$W), an index expressed in dollars per head to predict profitability differences in progeny due to genetics from birth to weaning. The underlying objective being producers will retain 20% of the female progeny as replacements and sell the rest of the cull females and their male counterparts as feeder calves. Traits included are as follows (in no particular order): birth weight, weaning weight, milk and mature cow weight.

Feedlot Value (\$F), an index expressed in dollars per head to predict profitability differences in progeny due to genetics for postweaning feedlot merit compared to the progeny of other sires. The underlying objective assumes producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis, but with no consideration of premiums or discounts for quality and yield grade. Traits contributing directly to the index are as follows: yearling weight (gain), carcass weight and feed efficiency.

Grid Value (\$G), an index expressed in dollars per carcass to predict profitability differences in progeny due to genetics for carcass grid merit compared to progeny of other sires. The underlying objective assumes producers will market cattle on an above-industry-average carcass grid. Traits included in the index are as follows (in no particular order): carcass weight, marbling, ribeye area and fat.

Beef Value (\$B), a terminal index expressed in dollars per carcass to predict profitability differences in progeny due to genetics for postweaning and carcass traits. This terminal index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a carcass grid. Traits included in the index are as follows: yearling weight, dry matter intake, marbling, carcass weight, ribeye area and fat.

Combined Value (\$C), expressed in dollars per head, is an index which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid. EPDs directly influencing a combined index: calving ease direct (CED) and maternal (CEM), weaning weight (WW), yearling weight (YW), maternal milk (Milk), heifer pregnancy (HP), docility (Doc), mature cow weight (MW), foot angle (Angle), claw set (Claw), dry matter intake (DMI), marbling (Marb), carcass weight (CW), ribeye area (RE) and fat thickness (Fat).

Targeting the Brand

The Certified Angus Beef Targeting the Brand logo identifies animals with genetic predictions focused on carcass quality. The logo requirements are met when genetic predictions are breed average or higher for two key metrics: Marbling EPD and Grid Value (\$G). Qualifying animals (as of Fall 2019) have a Marbling EPD of at least +.54 and \$G of at least +46. These values represent the Angus breed average for non-parent bulls, which is utilized regardless of sex and age. Realize that carcass traits need to be balanced with maternal traits and other economically important traits vital for progressive, profitable operations.

Dale and Mary Barber, center, were honored as inductees into the American Hereford Association Hall of Fame during the 2018 AHA Annual Meeting and Conference. The Hall of Fame honor annually recognizes breeders who have dynamically influenced the direction and advancement of the Hereford breed.

BARBER RANCH has been family owned and operated since 1904, running purebred Hereford cattle continuously. We have used artificial insemination for nearly 50 years to continually strive to offer our customers cattle that will rank at the top of the industry, both genetically and phenotypically. Embryo transplant is also heavily utilized to produce genetics that are consistently on the leading edge of the Hereford industry. Barber Ranch bloodlines can be seen throughout Hereford pedigrees all over North America. We continue to seek fresh genetics and are proud to offer breeding options that are at the forefront of the curve. We strive to raise bulls that will sire progeny that perform in the pasture, in the feedyard and on the plate. We demand cattle with a lot of maternal ability bred into them, great udders, and a good look. You are invited to visit us online and at the ranch any time.

Ranch (806) 235-3692 • barberranch.com 

THANK YOU FOR YOUR INTEREST AND SUPPORT!

 **CENTRAL** Life Sciences®

**DOING NOTHING
IS NOT HOW YOU
GOT HERE.
CONTINUE DOING SOMETHING ABOUT HORN FLIES**

It's almost the end of horn fly season.

Don't let all your hard work this season be diminished.

Keep Altosid® IGR in your feed supplement until 30 days after the first frost to stop overwintering larvae and give your herd a better chance of reaching its production potential. Do something about horn flies and get a jump on next spring. Don't forget to keep Altosid® IGR in your feed supplement until 30 days after the first frost.

To learn more, visit AltosidIGR.com.

BARBER RANCH BULLS

- ✓ Powerful
- ✓ Docile
- ✓ Efficient
- ✓ Fertile
- ✓ Backed by over a century of genetic progress

Breed defining sires are offered annually in our bull sale.

Both new and repeat buyers continue to select their herd leaders from Barber Ranch.

Be with us Wednesday, November 13 in San Saba and see how

Barber Ranch genetics can elevate your next calf crop to premium levels!

BR CHARLES HUTTON 6033

is an example of the quality that is offered throughout our sale. Out of a first-calf heifer and sired by a Barber Ranch herd sire, 6033 sold mid-sale, sight unseen in our 2017 bull sale. Be assured that each bull we offer has the genetic potential to be a herd improver!
