GARDINER

Hello 2021!

We are excited for the New Year and are looking forward to great things happening for our family, the GAR team, our customers and American agriculture!

All families and businesses evolve and change over time. I have a friend that recently told me he has seen “a lot of changes over his lifetime, and he was against every darn one of them 😊!!” Yet, ready or not, we all must evolve.

Garth Gardiner, who has been with the GAR team most of his life, has decided to “retire” and pursue his passion for breeding horses. He and his family have moved to Texas to be closer to the action. We wish them the very best in all that they do.

Gardiner Angus Ranch is fortunate to have members of the next generation who are hungry, aggressive, and ready for action! Grant, Ransom, Cole, Landon Borgelt and Payton Redfearn do much of the heavy lifting on the ranch. Jeff Golden, Scott Tune, Eric Campbell and Kurt Borgelt have the experience to make this ranch work! We are fortunate to have dedicated people that have literally committed much of their lives to the business of beef at Gardiner Angus Ranch.

We continue to be thankful for access to the world’s most reliable sources of genetic predictions. The American Angus Association has been vital resource for throughout my lifetime. The Association has helped us make genetic improvement decisions that aid us and our customers. Since 2014, Method Genetics has been phenomenal in helping us to hone in on profitability and to benchmark our cattle against our customers’ cattle. Thank you, Dr. Sally Northcutt and Bill Bowman!

U.S. Premium Beef has literally kept our family and many of our customers in business since its inception in 1997. This company has provided us with the targets for adding value and paid us for hitting those targets. The opportunity to have a voice in the governance of National Beef has been very beneficial for us and for the entire beef industry.

So, as we embark on our 4<sup>th</sup> Annual Early Bird Sale, I would like to suggest that as proud as we are of these cattle, we are even more proud of the people on the GAR team who stand behind the cattle. It takes everyone working together.

We are also very appreciative of you, our loyal customers, who have worked closely with the Gardiner Angus Ranch Family.

*On behalf of the whole Gardiner family,  
 thank you for your interest in Gardiner genetics.*

## 2021 "Early Bird" Bulls that Sell

The 315 bulls featured in our 4<sup>th</sup> Annual "Early Bird" Sale are sons of 28 different sires. However, 74% of the bulls in the sale are sired by six of our most trusted herd sires: **GAR Ashland** (83 sons); **SydGen Enhance** (37 sons); **GAR Phoenix** (33 sons); **GAR Momentum** (30 sons); **GAR Quantum** (28 sons) and **GAR Inertia** (22 sons). These are all sires we trust will satisfy those customers seeking reproductive efficiency, calving ease, docility, post-weaning growth, feedlot performance or carcass value. However, among the six sires used most heavily are two, Ashland and Quantum that represent both ends of our genetic enhancement spectrum.

**GAR Ashland** (DOB 3/15/2015), the sire with the most sons in this sale, is an "old timer" in this group. We introduced Ashland to you for the first time as the sire of bulls in the 2019 "Early Bird" Sale. At that time he was described as "somewhat of an outcross for us" with "fluid-moving, breathtaking calves that cattlemen love." He has certainly lived up to that billing. Furthermore, with the addition of hundreds of progeny records his EPDs for calving ease, yearling weight, marbling and ribeye area have remained in the Top 3 or 4% of the Angus breed. Ashland is an **ESTABLISHED** sire. If you want to "lock in" on calving ease with growth and carcass quality take a look at the 83 Ashland sons that sell.

**GAR Quantum** (DOB 8/18/16) is like a "shiny new toy" among this group of sires. The 28 sons of Quantum offered in this sale are the "Grand Opening" for Quantum as a GAR herd sire. His Top 3% calving ease, Top 3% marbling, Top 1% ribeye area and Top 1% \$BEEF are all reasons to consider his sons when you select bulls in this sale.

We have called GAR Momentum the best "pounds in the right package" bull of the Angus breed. This son of Momentum is a higher-powered version of his sire. Quantum progeny are fun to look at and handle. These agile cattle with superior feet bring "superior pounds in the right package" to a new level! Remember, as important as marbling is, we need heavier carcass weights to hit today's target. We also need more ribeye area per hundred weight to help these heavier carcasses avoid being discounted as a YG 4. Quantum sons can

add weight and muscle. *They represent a new level of "you may have it all" genetics!*

The EPDs and indexes from the American Angus Association (AAA) allow buyers to compare our sale bulls to other registered, purebred Angus bulls. The Angus EPDs are familiar to our customers and allow comparisons of similar traits among purebred cattle. Depicted in the table below are the average EPDs and percentile rankings for all bulls in the sale.

### Average AAA Genetic Predictions For The 2021 Early Bird Sale Bulls

CED	BW	WW	YW	YH	DOC	HP	SC	Milk	SEN	CW	MARB	RE	\$M	\$W	\$F	\$G	\$B	\$C
<b>+11</b>	<b>+0.9</b>	<b>+73</b>	<b>+131</b>	<b>+8</b>	<b>+26</b>	<b>+10.1</b>	<b>+81</b>	<b>+28</b>	<b>-26</b>	<b>+57</b>	<b>+1.22</b>	<b>+87</b>	<b>+63</b>	<b>+79</b>	<b>+97</b>	<b>+82</b>	<b>+179</b>	<b>+295</b>
Top 15%	Lowest 40%	Top 8%	Top 6%	Lowest 25%	Top 12%	Top 64%	Top 48%	Top 30%	Top 86%	Top 13%	Top 40%	Top 6%	Top 14%	Top 6%	Top 14%	Top 2%	Top 2%	Top 2%

We are proud of the EPDs and index values of these sale bulls because they represent the amount of genetic improvement we have achieved through disciplined selection for "pounds in the right package" emphasizing calving ease, early growth, moderate frame size, maternal function and end-product excellence using a total-AI program begun in 1964.

# 2021 "Early Bird" Bulls that Sell

## SEE PAGES 80-82 FOR DESCRIPTION OF METHOD GENETICS EVALUATION

Each of the sale bulls has been selected for the sale because it **EXCELLED** when evaluated using the Method Genetics (MG) indexes. Our level of confidence in the MG index values is based on the fact that the Method database contains many thousands of phenotypes and genomics derived from GAR cat-

tle and GAR's customers' cattle. Method Genetics' weighting is connected directly to the value-added in the commercial beef industry. We believe other profitability indexes lack the important "ties" to the industry which Method Genetics provides by including genomic data from commercial cattle having actual slaughter data and closeout information.

The average ROI (retained ownership index) of bulls offered on January 25<sup>th</sup> is in the Top 5% of a unique population of cattle in the Method Genetics database. The sale order is heavily influenced by each bulls Method Genetics evaluation results. Depicted in the table below are the average Method Genetics indexes for Maternal Production, Quality Pounds and Retained Ownership of all bulls in the sale.

### Average Method Genetic Predictions For The 2021 "Early Bird" Sale Bulls

Maternal Production Index (MPI)
<b>+158</b> Top 7%
Quality Pounds Index (QPI)
<b>+152</b> Top 6%
Retained Ownership Index (ROI)
<b>+280</b> Top 5%

We have learned to place the most emphasis in genetic selection on the Retained Ownership Index based on two outcomes:

1. ROI has been the best indicator of profitability when selecting replacement heifers for a commercial herd, and
2. ROI is the best indicator of the performance and profitability of commercial heifers and steers retained and sold for slaughter on a quality-based grid.

We encourage you to use the Retained Ownership Index if your selection is aimed at one or both of those goals.

### 18<sup>th</sup> Annual Profit Proven Sale

On November 23, 2020, Gardiner Angus Ranch hosted the 18<sup>th</sup> Profit Proven Sale for GAR customers. Our customers understand that ROI (Retained Ownership Index) does a tremendous job of identifying value. These commercial producers have invested in their cattle by using GAR genetics and by enrolling them in the Method Genetics program to identify and market value. Here are the results of the Profit Proven Sale:

#### PROFIT PROVEN SALE CATEGORIES AND AVG\$/HD

128 Commercial open heifers (per head)	..... \$1,305.00
294 Commercial bred heifers (per head)	..... \$2,058.00
100 Commercial bred cows (per head)	..... \$2,270.00
100 Commercial pairs (per pair)	..... \$2,005.00

**622 Head grossed ..... \$1,199,850.00**  
**For an overall sale average of ..... \$1,929.00**

By comparison, a special cow sale in the region held the same day averaged \$500 per head less on bred females and pairs. Heifer calves in that sale sold for \$400 less than the Profit Proven females.

#### We love helping our customers sell their cattle!

Results of the Profit Proven Sale indicate that genetic predictions work well for us AND OUR CUSTOMERS. We invite you to use these tools to create value in your own operations and produce some of the very best beef cattle in the world!

**BOTTOM LINE:** Genetic predictions work well. They give us all a greater chance to improve the bottom line of our operations. We invite you to use these tools when making your selection of bulls in this sale.

## Henry Gardiner Scholarship & Lecture Series

2020-2021 Henry Gardiner Scholarship Winners

Henry Gardiner's belief was to "pay it forward" and leave everything better than you found it. Thanks to the generosity of our friends and customers, The Henry C. Gardiner Scholarship has awarded \$140,000 in scholarship money to 31 students at Kansas State University. The proceeds from the sale of GAR Enhance N5339 will go entirely to this scholarship fund. Thank you all very much! Selling 100% possession and retaining 1/2 revenue sharing and semen interest.

## Revenue Sharing and Semen Interest

You will notice we are selling revenue sharing and semen interests on all bulls. This means the bull is totally in your control in how you want to handle him and you get 100% of the salvage value of the bull. Simply, we are reserving the right to a share of semen sales revenue from the bull if, at some time in the future, semen sales become a possibility. If you sell the bull to another breeder, Gardiner Angus Ranch retains the semen interest.

It is unlikely that large amounts of semen will be sold from many bulls. However, bulls are often "discovered" later in life, after proving themselves in the breeding pasture. It is for this reason we keep a semen interest in all bulls sold in our production sale.

Even bulls sold to commercial herds may become popular at a later time, as more carcass data is collected on their calves.

If you purchase a bull that we retain an interest in and you choose to collect semen from that bull as an "insurance policy" for your own use, that semen is 100% yours. Gardiner Angus Ranch may also wish to collect semen from the bull, either for in-herd use or to build a jointly-owned semen bank for sale purposes.

If you are not interested in collecting semen on the bull, GAR has the right to collect the bull, at their own expense, for their own use. Semen collection will be arranged at the convenience of the owner of the possession interest.

Lot 21

G A R Ashland N6079

Table with columns: Birth Date, Bull, +19706588, Tattoo: N6079. Includes EPDs CED, BW, WW, YW, RADG, DMI, YH, SC and various production records.

Selling 100% possession and retaining 1/2 revenue sharing and semen interest.

Lot 24

G A R Ashland N5379

Table with columns: Birth Date, Bull, +19706519, Tattoo: N5379. Includes EPDs CED, BW, WW, YW, RADG, DMI, YH, SC and various production records.

Selling 100% possession and retaining 1/2 revenue sharing and semen interest.

**Delivery Rights**

Many of our customers realize the value of access to GAR USPB delivery rights. Today, the demand exceeds our supply. Due to the increased demand, we are requiring prior authorization. If you are a GAR customer, retaining ownership, and would like to use GAR delivery rights, please contact Mark Gardiner (620) 635-5095 for prior authorization.

**Customers using GAR genetics earned an average of \$100.50 per head in premiums in 2020. More than \$10.76 million in premiums and dividends have been paid to GAR customers using USPB delivery rights.**

Zach Forsythe, one of our three fall interns at GAR, has been a "go to" guy during his internship. His "can do" attitude will help Zach achieve success as he applies to vet school.

17 Month Old Bulls

---

“

## **DISCIPLINE WILL BE REQUIRED FOR EVERY GENERATION AT GAR.**

*As we “power up” in this industry, it seems inevitable that we will see too much stature...cattle that are too big. For us to achieve what our customers demand, we must remain disciplined!*

---

”

## Delivery Rights

Many of our customers realize the value of access to GAR USBP delivery rights. Today, the demand exceeds our supply. Due to the increased demand, we are requiring prior authorization. If you are a GAR customer, retaining ownership, and would like to use GAR delivery rights, please contact Mark Gardiner (620) 635-5095 for prior authorization.

**Customers using GAR genetics earned an average of \$100.50 per head in premiums in 2020. More than \$10.76 million in premiums and dividends have been paid to GAR customers using USBP delivery rights.**

Landon Borgelt and Jodie take a break from baling alfalfa this fall.

## GAR-Influenced Commercial Heifers

Selling two groups, 155 head of bred commercial replacement heifers. The heifers are Method Genetics tested and the individual EPDs and Indexes will be available before sale day. The females will sell in minimum of 10 head groups. Buyer can take 10 head or the entire group, but must take a minimum of 10 head. **These groups qualify for GAR FREE DELIVERY and repeat buyer discount!**

### GROUP 1

**95 head of GAR-Influenced commercial Angus heifers, AI 11/19/2020 to GAR Breakthrough. Method Genetics tested. Individual EPDs and indexes available before sale day.**

### GROUP 2

**60 head of GAR-Influenced commercial Angus heifers, AI 11/18/20 to GAR Sure Fire. Method Genetics tested. Individual EPDs and indexes available before sale day.**

The Method Genetics index values are derived from Method Genetics EPDs combined with industry-focused economic weightings. The Method EPDs are generated from a multi-trait, 'single-step' genetic evaluation that uses performance measures, ancestral pedigree, and

available DNA genotypes. This single-step approach incorporates the genotypes directly into the genetic evaluation process and was implemented at Method in the summer of 2014.

### Method Genetics® Selection Index Key Used in the catalog

#### MATERNAL PRODUCTION INDEX (MPI):

The Maternal Production Index is reported in dollars per calf produced from the breeding herd with Angus-based genetics. It encompasses direct and maternal calving ease, heifer pregnancy, weaning growth, maternal milk, and mature size differences in a scenario where replacement females are retained and calves are marketed at weaning.

#### QUALITY POUNDS INDEX (QPI):

The Quality Pounds Index is reported in dollars per calf for herds with Angus-based genetics. It focuses on the terminal side of the herd's business for feedlot gain and carcass merit genetic differences. There are no provisions for calving ease or maternal traits, with the assumption that all calves are under a retained ownership scenario fed out and marketed on a premium quality-based grid.

#### Method Genetics Index/Percentile

MPI/%
167/1
QPI/%
166/1
ROI/%
300/1

#### METHOD GENETICS INDEX PERCENTILE RANKS (%):

A numeric ranking of the animal's Index values on a 1% to 100% scale. A lower numeric value is considered more favorable. For example, a 25% presented with an index indicates that animal is in the upper 25 percent of the animals in the Method Genetics genetic evaluation for calves born in the last five years.

#### RETAINED OWNERSHIP INCOME (ROI):

Cattle producers interested in a complete production system approach from conception through carcass end-point can use the Retained Ownership Income index ties together reproduction, calving ease, maternal genetic merit, growth throughout the calf's lifetime, and quality based carcass merit in an Angus-based herd. The ROI is reported in dollars per calf produced in the herd, and consolidates the sub-indexes of MPI and QPI.

## ATTENTION INTERNET BIDDERS

Every effort, within our control, has been made to provide an Internet bidding platform that responds to your bids in real time. However, Gardiner Angus Ranch sales are rapid paced events. Depending on Internet speed at your location, real time bidding may not be possible. If you are interested in specific lots, we encourage you to contact the GAR designated sale representatives or Matt Caldwell, Jeff Mafi or Bill Bowman or any member of the Gardiner family. Your bids will be handled professionally and confidentially.

## Repeat Buyer Policy

Once again we are offering our "repeat buyer credit policy". This policy is the same as in previous years. If you purchased an animal in our January 2020, April 2020, May 2020 or September 2020 sales, you will receive 5% off your purchases in this sale. If you have not made a GAR purchase in the last 12 months, but make a purchase in this sale, you will become a repeat-buyer and receive 5% off of any future purchase you make in the next 12 months. This 5% discount is determined after all credits have been subtracted from the gross purchase price.

# The Method Advantage

## Method Genetics Benefits for Commercial Producers

**You buy good bulls with key genetic values for herd improvement.**

**You know that EPDs are a selection tool to assist in focusing your production goals.**

**You target an industry-focused high quality carcass value as part of your breeding goals.**

Yet, when it comes to the cow herd and replacement heifer choices or selection strategies, the access to commercial genetic selection tools aligned with your goals and in the language of our industry (EPDs, indexes) is limited.

Method Genetics® results may just be what you need. In nearly six years (that's about a generation interval in a commercial cow calf operation), Method customers in over 20 states now have access to EPDs and index values for their females to fine tune their selection strategies. This is a progressive step beyond just placing genetic pressure on the sire side of the equation.

### **What is the goal of Method Genetics?**

Method Genetics provides a flexible, analytical opportunity for Angus-based cattle producers by using DNA technology and incorporating it into a genetic evaluation system.

### **Who is the target audience of Method?**

Method selection tools are geared toward commercial Angus cow herds interested in characterizing potential replacement heifers and foundation females.

### **Why is Method Genetics different?**

Established in 2014, Method Genetics LLC provides genetic selection tools and decision-making assistance related to commercial cattle production. Through the Method single-step multi-trait genetic evaluation, commercial cow-calf operators can access EPDs and indexes on their cow herd for use in genetic selection. DNA technology makes this selection advantage available to commercial herds, large and small, that in the past could only use EPDs in sire selection.

### **How do I use Method Genetics results?**

Method results are typically used to rank replacement females for selection and culling. Producers review Method results when purchasing potential herd sires and use the Method rankings to match their herd goals. Emphasis is placed on the Method indexes for maternal, growth, and retained ownership.

### **How do I begin participating in Method Genetics?**

Most producers begin by collecting DNA samples for genotyping. Blood cards and tissue sampling units are acceptable. There are no enrollment fees. Many producers have historical data from their herds (weaning weights, carcass data) that they have not ever really been able to fully utilize to aide in selection for their herds. This information can also

be incorporated into the genetic evaluation to give producers even more informative selection tools.

### **How are Method indexes (MPI, QPI, and ROI) computed?**

Your genotyping results on tested animals go through our complete genetic evaluation that generates key Method Genetics EPDs and indexes. Method has a database of performance trait records, pedigrees, and DNA genotypes used in a single-step genetic evaluation to derive EPDs for use in the Method indexes. Method does not use breed organization EPDs are part of this process. Because of what we know about EPDs and their derivation, Method results are comparable to other Method results, but they are not comparable to breed organization EPDs.

### **Can this testing identify parentage?**

Method Genetics has a large database of AI and natural service sires for use in sire assignment. Participants with tested females on file have the opportunity to generate pedigrees from this parentage benefit, adding increase accuracy to their Method results. Parentage work is included in the Method DNA testing at no cost.

## What details are needed on commercial Angus samples for DNA testing?

Samples are sent directly to Method Genetics personnel. The minimum inputs needed for commercial cattle DNA samples are a unique herd ID, approximate age, and gender for each sample. We can incorporate any pedigree you know, also.

## What is Method ROI that I keep hearing about and seeing in catalogs?

METHOD GENETICS
MPI/%
168/2
OPI/%
160/2
ROI/%
296/1

Cattle producers interested in a complete production system approach from conception through carcass end-point would typically use the Retained Ownership Income (ROI) index as a tool. ROI ties together reproduction, calving ease, maternal genetic merit, growth throughout the calf's lifetime, and quality-based carcass merit in an Angus-based herd.

The ROI is reported in dollars per calf produced in the herd, and it consolidates the sub-indexes of MPI and QPI.

## What results are received after testing is completed?

Most producers receive the Method EPDs for calving ease, carcass traits, and docility. Of primary interest are the three Method Genetic index (MPI, QPI, ROI) solutions that accompany the EPDs. Results are returned in a sortable spreadsheet for use at the operation in breeding, selection and culling decisions.

## How do my Method results compare to cow herds with similar goals?

Method customers receive summary statistics to compare their herd results to a database of similar commercial cow herds with goals focused on maternal and retained ownership traits for a high-quality carcass product. This benchmark data helps Method customers characterize and understand where their current herd's genetic level is and provides specific selection direction to reach goals for consistent, high-quality production of USDA Prime and Premium Choice product.

## What is the Method Genetics Marketing Advantage?

Beyond the use of Method results for selection decisions by a commercial cow-calf producer, this information has become a reliable means to characterize the genetic merit of replacement females, providing confidence for buyers purchasing replacements. Selecting commercial replacement females with the Method Genetics results allow a producer to jump-start their program with known genetics based on a proven track record.

**MPI: Maternal Production**  
**QPI: Quality Pounds**  
**ROI: Retained Ownership Income**

## Where do the percentile ranks on young sires and AI sires seen in catalogs come from?

Method has seedstock participants using the Method Prime test and they receive more detailed EPDs and percentiles based upon the Method Genetic population. They have made a commitment to their customers using the Method Genetics system by testing and providing the Method indexes on the bulls they offer. The bulls they sell provide a great opportunity as they have Method EPDs and indexes which are comparable to other Method Genetics-generated solutions, regardless of the testing points.

## How do I choose a level of testing at Method?

Most commercial Angus herds go with the Method Choice (\$34). Method Prime runs \$45 as of today and is used mostly by seedstock participants.

## What age do I pull DNA samples on my animals?

DNA samples can be collected at any age. Advanced customers in the Method system have begun to use tissue sampling units on calves after birth. We encourage customers to conservatively approach testing and focus on the newest generations of their cattle.

## I am already testing with Method Genetics, so how can I learn more about my cattle?

If details are provided from the customer, we use existing pedigree information (for example on registered Angus bulls owned or AI sires being used or females of known genetics) to fill in relationship gaps, as well as incorporating this pedigree information into the genetic evaluation tools created. From a performance record standpoint, we can also incorporate these data (contemporary group weaning weights for example) into a genetic evaluation and key EPDs and index values include this information.

## Do Method Genetics results ever change?

We continue to add performance records, pedigree, and genotypes to the Method genetic evaluation. An EPD is a prediction of an animal's true genetic merit that has an associated possible change, or standard error of prediction. EPDs are not static values and can change as more information is incorporated into the system from one evaluation to the next. Customers actively participating in the Method Genetics program can request cow herd updates as needed to better prepare for bull selection and breeding herd management.

## How can I learn more about Method Genetics benefits?

Method Genetics, LLC provides genetic selection tools that enhance decision making for commercial Angus cow-calf producers. Using genetic evaluation methodology with performance records, pedigree, and genomic information, Method Genetics® indexes provide customized solutions to assist producers in capturing and implementing genetic values into their individual breeding programs. For more information, contact Bill Bowman (bbowman@methodgenetics.com 816-752-0079) or Dr. Sally Northcutt (snorthcutt@methodgenetics.com 816-244-0969). General information is available on [www.methodgenetics.com](http://www.methodgenetics.com) or follow us on Facebook.

# Glossary of Terms and Abbreviations

**Expected Progeny Differences (EPD)**, is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

## GROWTH

**Calving Ease Direct (CED)**, is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

**Birth Weight EPD (BW)**, expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

**Weaning Weight EPD (WW)**, expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

**Yearling Weight EPD (YW)**, expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

**Residual Average Daily Gain (RADG)**, expressed in pounds per day, is a predictor of a sire's genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

**Dry Matter Intake (DMI)**, expressed in pounds per day, is a predictor of difference transmitting ability for feed intake during the postweaning phase, compared to that of other sires.

**Yearling Height EPD (YH)**, is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to that of other sires.

**Scrotal Circumference EPD (SC)**, expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

**Docity (DOC)**, is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

## MATERNAL

**Heifer Pregnancy (HP)**, the heifer pregnancy EPDs are designed to characterize differences among sires in the Angus breed for daughter's heifer pregnancy. When comparing two sires based on their heifer pregnancy EPDs (reported in units of percentage), a higher EPD sire would be expected to have daughters with a greater probability or chance of becoming pregnant than a sire with the lower EPD.

**Calving Ease Maternal (CEM)**, is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

**Maternal Milk EPD (Milk)**, is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

**Mature Weight EPD (MW)**, expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

**Mature Height EPD (MH)**, expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

**Cow Energy Value (\$EN)**, expressed in dollar savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

## CARCASS

**Carcass Weight EPD (CW)**, expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

**Marbling EPD (Marb)**, expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

**Ribeye Area EPD (RE)**, expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

**Fat Thickness EPD (Fat)**, expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

## YEARLING AND ULTRASOUND ADJUSTED MEASUREMENTS

**Adj. Yrlg. Scrotal Circ:** Adjusted yearling scrotal circumference, the bull's scrotal circumference measured in centimeters adjusted to one year of age.

**Adj. Yrlg. Hip Ht.:** Each bull's hip height measured in inches and adjusted to one year of age.

**Adj. %IMF:** The percent intramuscular fat (marbling) adjusted to 365 days of age. Heritability for marbling is in the moderate range.

**%IMF Ratio:** The percent above or below average (100 = average) a bull or female is for its marbling scan within its contemporary group.

**Adj. Yrlg. Ribeye Area:** Each bull's ribeye area measured in square inches and adjusted to one year of age.

**REA Ratio:** The percent above or below average (100 = average) a bull is for his adjusted ribeye area.

**Adj. Rib Fat:** This is the off-test backfat measured in inches adjusted to 365 days of age.

**Rib Fat Ratio:** The percent above or below average (100 = average) a bull or female is for its backfat scan within its contemporary group.

**Adj. Rump Fat:** This is the off-test rump fat measured in inches adjusted to 365 days of age.

**Rump Fat Ratio:** The percent above or below average (100 = average) a bull or female is for its rump fat scan within its contemporary group.

## \$VALUE INDEXES

**Weaned Calf Value (\$W)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for pre-weaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

**Fleedot Value (\$F)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning merit compared to progeny of other sires.

**Grid Value (\$G)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

**Quality Grade (\$QG)**, \$QG represents the quality grade segment of the economic advantage found in \$G. \$QG is intended for the specialized user wanting to place more emphasis on improving quality grade. The carcass marbling (Marb) EPD and ultrasound-derived percent intramuscular fat (%IMF) EPD contribute to \$QG.

**Yield Grade (\$YG)**, \$YG represents the yield grade segment of the economic advantage found in \$G. \$YG is intended for the specialized user wanting to place more emphasis on red meat yield. It provides a multi-trait approach to encompass ribeye, fat thickness and weight into an economic value for red meat yield.

**Beef Value (\$B)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning and carcass value compared to progeny of other sires.

## DAM'S PRODUCTION RECORD:

**Act. BW — Actual Birth Weight:** The number of calves each dam has had and the average actual birth weight of those calves. Example: 3-81 means the dam has had 3 calves with an average actual birth weight of 81 pounds.

**BWR — Birth Weight Ratio:** The number of calves a dam has had and their average birth weight ratio. Example: 2-98 means the dam has had 2 calves with an average BWR of 98.

**WWR — Weaning Weight Ratio:** The number of calves a dam has had and their average weaning weight ratio. Example: 2-102 means the dam has had 2 calves with an average WWR of 102.

**YWR — Yearling Weight Ratio:** The number of calves a dam has had and their average yearling weight ratio. Example: 2-103 means the dam has had 2 calves with an average YWR of 103.

## DAM'S ULTRASOUND PRODUCTION RECORD

**%IMF:** The number of calves that each dam has had, and the average %IMF ratio on those calves. Example: 11-112 means that the dam of this animal has had 11 progeny ultrasounded for IMF with an average ratio of 112.

**REA:** The number of calves that each dam has had, and the average ribeye area ratio on those calves. Example: 11-112 means that the dam of this animal has had 11 progeny ultrasounded for REA with an average ratio of 112.

**Fat:** The number of calves that each dam has had, and the average rib fat ratio on those calves. Example: 11-112 means that the dam of this animal has had 11 progeny ultrasounded for rib fat with an average ratio of 112. A ratio above 100 would mean that this animal has above average rib fat (more fat) and a ratio of less than 100 means that the animal has less rib fat (less fat) within the animal's contemporary group.

**RU Fat:** The number of calves that each dam has had, and the average rump fat ratio on those calves. Example: 11-112 means that the dam of this animal has had 11 progeny ultrasounded for rump fat with an average ratio of 112. A ratio above 100 would mean that this animal has above average rump fat (more fat) and a ratio of less than 100 means that the animal has less rump fat (less fat) within the animal's contemporary group.

**BW — Birth Weight:** The actual weight in pounds at birth.

**Calving-Ease Score:** 1 = unassisted; 2 = some assistance; 3 = mechanical assistance.

# METHOD GENETICS® CHOICE EPD AND SELECTION INDEX KEY

**CARCASS WEIGHT (CW):** The carcass weight EPD is reported in pounds of harvest carcass weight. As with other weight traits, selection for weight genetics is moderately to highly heritable and will lead to increased directional genetic change in pounds. The CW EPD has contributions not only from the genotyped calves, but harvest carcass records, ultrasound indicator trait results, and available pedigree.

**MARBLING (MARB):** Marbling EPDs are reported in harvest marbling score units, with a higher value being more favorable.

**RIBEYE AREA (REA):** The ribeye area EPD, with a higher value as the typical desired direction, can be used to place selection pressure on this trait to impact red meat yield.

**CALVING EASE DIRECT (CED):** Reported as a percentage of unassisted calvings, this EPD is used to select favorable calving ease genetics for use in matings to first calf heifers. The value is more noted for sire selection. In Angus-influenced herds that have heavily emphasized calving ease genetics, selection pressure for this trait may or may not be a priority. A higher value is more favorable. For example if there was a 5 percentage point difference between two animals (+10 vs +5), one would expect 5 more calves out of 100 to be born unassisted in future progeny, to favor choosing the animal with the CED of +10.

**DOCILITY (DOC):** Docility is reported as a convenience trait with a higher value favoring more docile temperament. Reported in percentage units, these EPDs can be used as an accessory sorting tool as needed.

**CALVING EASE MATERNAL (CEM):** This EPD is applicable to calves out of daughters of first-calf heifers and their unassisted calving percentage difference relative to other individuals. Again, as with CED, a higher value is more favorable and reported in units of percent.

**MATERNAL PRODUCTION INDEX (MPI):** The Maternal Production Index is reported in dollars per calf produced from the breeding herd with Angus-based genetics. It encompasses direct and maternal calving ease, heifer pregnancy, weaning growth, maternal milk, and mature size differences in a scenario where replacement females are retained and calves are marketed at weaning.

**QUALITY POUNDS INDEX (QPI):** The Quality Pounds Index is reported in dollars per calf for herds with Angus-based genetics. It focuses on the terminal side of the herd's business for feedlot gain and carcass merit genetic differences. There are no provisions for calving ease or maternal traits, with the assumption that all calves are under a retained ownership scenario fed out and marketed on a premium quality-based grid.

**RETAINED OWNERSHIP INCOME (ROI):** Cattle producers interested in a complete production system approach from conception through carcass end-point should use the Retained Ownership Income index ties together reproduction, calving ease, maternal genetic merit, growth throughout the calf's lifetime, and quality based carcass merit in an Angus-based herd. The ROI is reported in dollars per calf produced in the herd, and consolidates the sub-indices of MPI and QPI.

**METHOD GENETICS EPD AND INDEX PERCENTILE RANKS (%)** are a numeric ranking of the animal's EPD and Index values on a 1% to 100% scale. For most traits a lower numeric value is considered more favorable, such as for CED EPD. For example, a 25% presented with an EPD indicates that animal is in the upper 25 percent of the animals in the Method Genetics evaluation for calves born in the last five years.

## The Gardiner Angus Ranch Breeding Guarantee

We guarantee that all breeding cattle sold by Gardiner Angus Ranch, both bulls and females, are fertile to the best of our knowledge. If a bull is injured at any time in the 12 months following the sale so as to make them functionally infertile, we will provide you with a satisfactory replacement, if available, or issue you a credit equal to the bull's purchase price minus the salvage value received for that bull. If a female is determined to be a non-breeder, then we would ask you to sell her and would offer you the difference of her purchase price minus the salvage value as a credit in any future GAR sale. This guarantee is in addition to the Sale Terms and Conditions of the American Angus Association which also apply.

## A Word About Free Delivery

Gardiner Angus Ranch offers its customers free delivery anywhere in the lower 48 states. As a part of that delivery we work with reputable livestock transportation companies that we feel comfortable with in the handling of your cattle in both a professional and conscientious way. GAR will do everything possible to deliver your cattle to a point that is convenient for both you and the trucking company. In some cases where there are cattle from multiple owners loaded on the same truck, it is necessary for the buyer to meet the truck at a central location such as a livestock auction or veterinary clinic relatively close to them. We also encourage the drivers to be as flexible as possible and request that they not deliver your cattle in the middle of the night if avoidable. If you would like to insure your cattle, you can do so on sale day. Most of the cattle to be delivered from the sale are delivered within 45 days after the sale. If, for any reason, you desire an expedited delivery, please notify Garth Gardiner at (620) 635-5632 and we will make arrangements for quicker delivery.

## Gardiner Angus Ranch Vaccination Program
