Make Ranching Great Again

Sale Catalog

Over 500 Bulls

Three Bull Sales

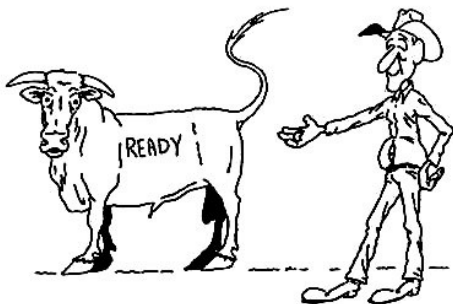

Dear Friends,

There has never been a better place to raise a family than on a working farm or ranch. For many decades, the cow-calf business was a great way to make a living. Unfortunately, that's no longer the case. Truth be known, most of today's cow-calf producers are doing good just to break even. They are not profitable enough to keep the next generation on the ranch. Without change, many family farms and ranches will cease to exist.

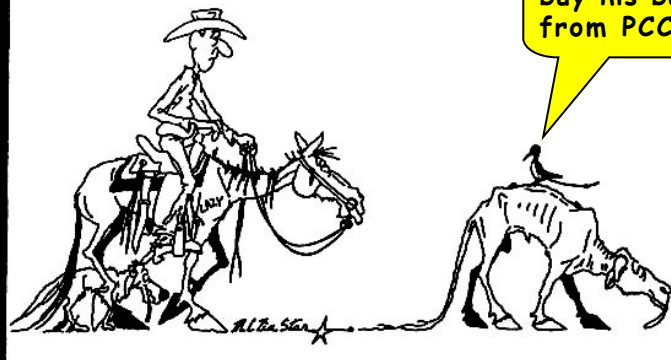

It's time to Make Ranching Great Again! While most cow-calf producers are struggling to make a decent living, others are expanding their business and building wealth. They know what it takes to Make Ranching Great Again. In a word, it takes CHANGE! You cannot keep thinking and doing what you have always thought and done. Pharo Cattle Company has the genetics and the philosophies you need to Make Ranching Great Again!

THREE Spring Bull Sales

❖ **Monday, April 5, 2021** ❖

At 1:00 PM (CT)

**West Auction, Inc.
20645 N. I-35
West, Texas**

Just south of town on I-35 at Exit 351

Lunch will be provided by PCC prior to the sale

TEXAS

Motel Accommodations:

Holiday Inn Express.....254-826-0900
West, Texas
(Ask for a Pharo Cattle Company **Discount Rate**)

❖ **Thursday, April 8, 2021** ❖

At 1:00 PM (CT)

**Springfield Livestock Marketing Center
6821 W Independence Dr.
Springfield, Missouri**

Just north of I-44 at Exit 70

Lunch will be provided by PCC prior to the sale

MISSOURI

Motel Accommodations:

AmericInn.....417-732-5335
Republic, Missouri
(Ask for a Pharo Cattle Company **Discount Rate**)

❖ **Monday, April 19, 2021** ❖

At 12:00 noon (MT)

**Burlington Livestock Exchange
46277 US Hwy 24
Burlington, Colorado**

Just west of town on old Highway 24

Lunch will be provided by PCC prior to the sale

COLORADO

Motel Accommodations:

Selling Bulls for 31 Years and Counting

Sale Information

Only the best sell. These **516** ranch-raised bulls uniquely represent both our philosophies and our breeding program. They have been carefully bred and selected to meet the demands of the commercial cowman. Several herd mates that did not live up to our expectations have already been culled. We keep extensive records on our cattle and we follow a very strict selection and culling program that is based on facts and figures, as well as on frequent observations and evaluations.

Cataloged. The bulls have been cataloged according to the sale they will be sold in and their breed groups. Each bull is identified with a lot number that corresponds to the number on his black, red or yellow PCC ear tag. The sale order at all three sales is expected to follow the lot numbers from low to high. Black tags will be used to identify lot numbers for the Texas Sale, red will be for Missouri and yellow will be used to identify lot numbers for the Colorado Sale. For the most part, bulls will be cataloged by sire groups (1/2 and 3/4 brothers). We will start each group with the highest rated bull within that group.

We have provided extensive information on each bull to help you make the right selections. This information is explained on page 8. We urge you to look for bulls that are strong in the traits your cowherd is weak in, but always remember to keep “balance” in mind because single trait selection can quickly wreck a cowherd. Registration certificates on all registered bulls will be transferred to the buyer.

NO Grain Required. Because it is the right thing to do, we develop our bulls on a 100% grain-free ration. Our forage-tested bulls are tested for their ability to perform on grass with some supplementation. Our yearling bulls are developed on a grain-free, high-roughage (mostly hay) ration designed for moderate gains of only 2 to 2.5 pounds per day.

Health and Fertility. We maintain a very thorough health and vaccination program. These bulls have all passed a health and breeding soundness examination and have been cleared for interstate transportation. All bulls tested negative for PI-BVD and trichomoniasis. They are **guaranteed breeders!**

Semen Interests. On designated bulls we retain the right to collect, use and market semen at some future date. As purchaser of the bull you will receive a 25 percent revenue-sharing semen interest, along with full possession of the bull. If done at all, semen will be collected at your convenience and at PCC’s expense. This in no way affects your use of the bull! Anyone with a semen interest will be allowed to collect and store semen for in-herd use with no obligation to others with a semen interest. In the event semen is marketed and revenue is produced the resulting proceeds, minus incurred expenses, shall be divided among those who own a semen interest. Designated bulls will be marked “**RETAINED SEMEN INTEREST**” in the catalog.

Cowboy Auction. Although our unique cowboy auction has an auction format, it has no fast-talking auctioneer and no loud, in-your-face bid takers. Everyone who has attended one of our Cowboy Auctions has appreciated and enjoyed it. Every bull will have a base price posted in this catalog. When it is time to sell a particular bull, we will ask those who are interested to raise their buyer number. If there is only one number in the air, the bull will be sold to that number at the base price. If there is more than one number in the air, we will increase the price in increments of \$250 or \$500, at the auctioneer’s discretion, until only one number remains. This provides a very simple, low-pressure way to purchase bulls. You will always know what the bid is and you will always know who is bidding against you.

The only problem with our Cowboy Auction is there can be a tie bid when the last two (or more) buyer numbers drop out at the same time. When that happens we will give the bid to the bidder with the lowest buyer number. The other bidder(s) will then be required to increase the bid by \$50 or \$100 (up to the next \$100 increment) to stay in the auction. If he increases the bid, then the bidder with the lowest buyer number can raise the bid another \$100, and so on. We can usually break a tie in 5 or 10 seconds.

Guaranteed Calving Ease. Most of the bulls offered in this sale could be successfully used on first-calf heifers. We rate each bull for calving ease with 1 to 5 “stars”. Our 5-star bulls would be the absolute best, but those with “3” and “4” stars are also recommended for use on most heifers. For the most part, our 2-star bulls are breed average for Angus and Red Angus. This is what everyone else is selling.

We are so confident in the calving ease of our 5-star calving ease bulls that we are going to do something that is unheard of in this business. We are going to provide a one-year **calving ease guarantee** on all of our 5-star bulls. For every calf you have to pull that was sired by one of our 5-star calving ease bulls we’ll pay you \$100. If a caesarean or other veterinary assistance was required, we’ll pay your vet bill. We want you to be able to look forward to your next calving season.

Genetic Defect Guarantee. Unlike many of our competitors, we will not sell a bull that is a potential carrier of any known genetic defect without DNA testing him to prove (guarantee) that he does not have a genetic defect gene. We guarantee that all of the bulls selling in this sale do not carry a gene for any known genetic defect.

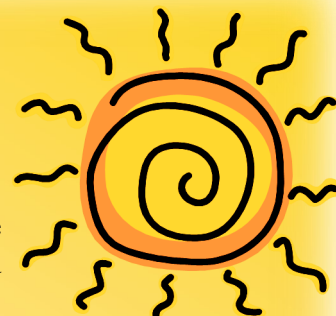

Repeat Buyer Discount. There is nothing more valuable to us than a happy customer who keeps coming back. This is our way of showing our appreciation. If you purchased a bull at one of our 2020 spring or fall sales, you will receive a **5% Discount** on all the bulls you purchase at any of these sales.

Quantity Discounts. To make it easier for you to purchase all your bulls at one sale, we offer quantity discounts. If you purchase five or more bulls at any one sale, we will give you a **5% Discount** on all the bulls you purchase at that sale. If you purchase ten or more bulls, we will give you a **10% Discount** on all the bulls you purchase at any one sale. Do the math — that’s **one FREE bull** for every nine that you purchase at any one sale! You cannot go together with others to receive this discount.

You cannot combine above discounts to receive a higher discount.

Announcements from the Auction Block and supplemental information provided at the sale will take precedence over the printed matter in this catalog.

SPECIAL **Drought Discount**

You will never find anything like this anywhere else. Pharo Cattle Company likes to find unique and different ways to help our customers. The current drought has been tough on many PCC customers. Because we understand the situation, we want to provide some monetary assistance.

With YOU in mind... we will be offering a Drought Discount at all three of our spring bull sales. You can receive up to a **10% Discount** on all the bulls you purchase — based on the severity of the drought in your area. This is our way of helping you make the best of a bad situation.

Our Drought Discount will be based on the *U.S. Drought Monitor Map*. It shows five levels of drought from “Abnormally Dry” to “Exceptional Drought.” Each level of drought is worth a 2% Discount. We will share a link to the *U.S. Drought Monitor Map* in our weekly emails. If you are not receiving our weekly emails, send us your email address.

We gave out a total of **\$95,000** in Drought Discounts at our three fall bull sales. Please note, this special Drought Discount will be applied *in addition to* any other discounts the buyer qualifies for. For example, if you are a repeat buyer, you will receive a 5% Repeat Buyer Discount *plus* your Drought Discount. If you purchase 10 bulls and if you are in the highest level of drought, you will receive a full **20% Discount**. That is like getting **Two FREE Bulls!**

PCC's One-Year Guarantee...

Our bulls have always had a reputation for being tough as nails. They also have a reputation for being able to breed more cows for more years. Even so, problems can and do occur. Therefore, all bulls purchased at a cataloged PCC bull sale will be guaranteed for one year from the date of purchase against injury or loss that renders them incapable of breeding, with the following exceptions.

Exceptions:

- Incurred during transportation
- Caused by motorized vehicle and/or equipment
- Caused by disease, nutrition or poisoning
- Caused by carelessness or neglect
- Caused by failure to maintain acceptable animal husbandry
- Caused by poor management (e.g., low cow to bull ratio)
- Caused by acts of God, war, insurrection or terrorism

This guarantee applies only to bulls that have been maintained, at all times, by the original purchaser for breeding purposes that are consistent with acceptable industry standards.

All injuries must be examined by a licensed veterinarian within 48 hours of injury. If the attending veterinarian deems treatment would be in the best interest of the animal, then treatment should be administered. Customer must notify PCC immediately after the bull has been examined by the veterinarian.

A letter from the attending veterinarian that identifies the animal, identifies the problem and provides an expected prognosis will be required. Pharo Cattle Company reserves the right to get a second opinion from another veterinarian. Getting the bull back into breeding condition will always be our first and primary objective.

If it is determined that the bull has sustained permanent damage, PCC will issue a credit for the purchase price less salvage value. If it is determined the bull should be functional for the following breeding season, PCC will issue a credit for 50% of the purchase price, and the customer will keep the bull. The credit must be used at a cataloged PCC bull sale within one year of the date it was issued.

Customer Service has always been very important to us. This will just make it easier.

30-Day Warranty...

Our 30-day Warranty covers the bull for 30 days after the sale. We require it on all bulls purchased through one of our three Stay-At-Home options, as well as on all bulls that will be delivered to one of our delivery points. This coverage is intended to cover liability issues and to protect the buyer's interests until the animal is safe and sound at its new home. The cost of this Warranty is **2%** of the purchase price. It will automatically be added to the purchase price of all Stay-At-Home purchases, as well as to purchases that will be delivered to one of our delivery points.

Stay-At-Home Options...

We prefer everyone to be in attendance on sale day. Realistically, however, we know there will be some scheduling conflicts and distance limitations. In these cases, we have arranged for you to be able to participate in our bull sale on an absentee basis. Once again, we have three Stay-At-Home options for you to choose from to complement our FREE and Very Afforda-BULL delivery options.

When you register to participate via one of our Stay-At-Home options, PLEASE call PCC at 800-311-0995 to let us know what delivery point you want to use.

In an effort to cover liability issues and to protect the buyer's interests, we require that a Basic 30-Day Warranty be purchased for all bulls purchased through our Stay-At-Home options. The cost of this coverage is 2% of the purchase price. See bottom of page 6 for details.

We invite you to stop by to evaluate the bulls prior to sale day. If that's not possible, we can provide a video tape or DVD of the bulls for home viewing — call Superior Productions at **800-431-4452**. The bulls can also be viewed online prior to the sale. Watch our weekly emails for details.

Sight-Unseen Bidding. If you are unable to attend our sale, we can arrange to have someone confidentially handle your bidding for you. We guarantee that your bulls will be purchased at the lowest price possible. Your bids will never be abused! Over the years, 25 to 30 percent of our bulls have been sold to customers who use our Sight-Unseen (SUS) program.

If you will allow us to help select the bull(s) that best fit your needs, we will **guarantee satisfaction** on your sight-unseen purchases. Please call **Kit or Tyson at 800-311-0995, Weston Walker at 855-541-5412 or Cody McDaniel at 844-541-5412** so we can discuss your needs. Our Sight-Unseen (SUS) program takes most of the risk out of purchasing bulls. Helping you with your purchases, however, places a lot of responsibility on us, so **please call early!** Except for an emergency, all Sight-Unseen bids must be received by **5:00 pm on Friday, April 2**, for the Texas Sale, **5:00 pm on Monday, April 4**, for the Missouri Sale, and **5:00 pm on Friday, April 16**, for the Colorado Sale (three days before each sale).

Internet Bidding. Superior Productions offers the convenience of bidding via the internet at **www.superiorclicktobid.com**. Regardless of your internet connection, you will be able to view the same video feed as seen on TV. To use this option, go to **www.superiorclicktobid.com** and follow the outlined steps. You will receive an email confirming your membership. Then you need to go back online, sign in and get registered to bid for the PCC Bull Sale. When you register to bid, be sure to ask Superior to email you their PCC Click-To-Bid tutorial. This will provide exact instructions on how to participate in our unique Cowboy Auction via the internet.

Phone Bidding via Rural TV. Superior Productions will broadcast our Spring Bull Sales to thousands of homes across the nation on Rural-TV — **Dish Network channel 998**. Please call Superior Productions at **800-431-4452** to register to bid. At that time, they will give you a PCC buyer number and the bid line number that you will use on sale day to place bids.

Paying for Purchases. Repeat customers who make purchases via one of our Stay-At-Home options will be contacted after the sale and asked to mail a check as soon as possible.

ACH Transactions (Electronic Funds Transfer). We now have the capability of handling your bull purchases by using an Electronic Funds Transfer. This has proven to be very quick and easy for everyone involved. If you choose to utilize this payment option, call us at **1-800-311-0995** before the sale. We will need permission to make an electronic draw from your account. **PLEASE use the Direct Debit Authorization Form provided in the back of this catalog.**

NOTE: This payment method will be required of all new customers who purchase bulls through one of our Stay-At-Home options.

Sale Information and Data — Explained

Actual and Adjusted Weights: Actual birth weights, along with adjusted 205-day and 365-day weights, are provided for most yearling bulls, while the forage bulls have been adjusted to 470 days. This is good information, but it doesn't tell the whole story because the surrounding environment can greatly affect these weights. Therefore, you can't use this information to make comparisons with other herds, but you can use it to make valid comparisons within a herd. Ratios make this very easy.

Ratios: Ratios are provided for birth weights, 205-day weights, 365-day weights, 470-day weights, and for rate of gain. A ratio shows how a bull compares to his within-herd contemporaries. A ratio of 100% is average, while a ratio of 105% is 5% above herd average, and a ratio of 95% is 5% below herd average. Birth weight ratios have been inverted. The lowest birth weights will have the highest ratios.

EPDs: EPD is short for Expected Progeny Differences. It's a prediction of the difference between the average progeny of one individual bull and the average progeny of other individual bulls. Since EPDs are able to take into account the differences that exist between environments, they can be effectively used to compare animals from different herds. Each breed association uses a different method for calculating their EPDs, so you **cannot** compare EPDs of bulls from two different breeds. Within a breed, though, EPDs can provide some very valuable information. For example, a bull with a birth weight EPD of -2.0 should sire calves that are 5 pounds lighter than a bull with a +3.0 birth weight EPD.

ADG on Test: Our yearling bulls were put on a short feed test to help us compare their growth potential. They were fed a grain-free, high-roughage ration designed for moderate gains of only 2 pounds per day. If young bulls are pushed any harder, it negatively affects their soundness, fertility and longevity. Our bulls won't be as big or as fat as bulls coming out of other programs, but they will be healthy and well conditioned. It is not at all unusual for our bulls to gain weight during their first breeding season.

Our forage-tested bulls were tested for their ability to gain weight on grass. Bulls that perform well in a forage test should sire cattle that are also efficient foragers. Instead of posting individual rates of gain, we are posting individual gain indexes. This figure accurately compares each bull to his herd mates.

Scrotal Circumference: Actual scrotal measurements will be provided on supplement sheets prior to each sale. These supplement sheets will be sent out via email. Keep in mind, there is absolutely no fat in the scrotum of these bulls. Testicle size, in relation to frame size, is a very good indicator of early maturity.

Frame Score: A frame score of 2.5 to 5 seems to be optimum for the cow herd, as well as the feedlot and packing plant. The smaller the frame, the more efficient the cow. The only difference between a frame 4 and a frame 5 is a couple of inches between the ground and the belly — which doesn't weigh anything and is impossible to eat! Our most efficient cows have a frame score of 2 to 4 — with enough thickness to weigh 1050 to 1250 pounds.

Frame score is hip height adjusted for age. Unfortunately, the formula used for young bulls is based on feedlot-developed bulls. It will not work on our forage or grain-free-developed bulls. Therefore, we use XS, S, S/M, M, M/L and L (roughly equivalent to frames 2.5 to 5.5).

Our Predictions: We have provided some predictions on how we feel these bulls should be rated for **Calving Ease, Disposition, Fleshing Ability, Low Maintenance, Hair Coat** and **Grass Efficiency**. Each bull is rated with 1 to 5 stars, with 5 being the best and 3 being about average. Fleshing Ability, Disposition, Hair Coat and Grass Efficiency are discussed on pages 10 and 11.

Maternal Information: Valuable information has also been provided on the mother of most bulls. **Cow Age** is the dam's age at calving. At calving we give each cow an **Udder Score** from 1 to 5. A score of 3 would be an average, yet very functional udder, while a score of 5 would be nearly perfect. On the registered bulls, we are also able to calculate a **Cow Longevity** score from 1 to 5 — with 5 being the best. It's rare to have a bull with a young dam have 5 stars for cow longevity, but it is possible.

Ultrasound Scanning

There has been a rapid-growing interest in grass-based genetics and grass-fed beef. In the past ten years, we have sold bulls and semen to well over 100 people who produce and market grass-fed beef. Although that is a small share of our overall market, it is still quite significant.

Finding genetics that work well in a grass-based program is becoming more and more difficult in the industry's corn-based genetic pool. To enable producers to more quickly identify cattle with the genetic makeup to excel in a grass-finishing program, scientists have perfected a live animal carcass software

program specifically for that purpose. We have been using this program since the spring of 2006. Cattle that can produce a superior carcass on nothing but grass will be able to do the same thing on grain.

All of the bulls in our spring sales have been scanned by Clay Nash. We believe you will find this data to be quite impressive. The ultrasound data, along with more explanation, can be found on pages 138 to 149. For help in using this information, feel free to call Clay at 870-897-3167. We also suggest you read the article Dr. Williams wrote on page 137.

Low-Maintenance

Many of the traits we now measure and have EPDs for do not have a direct effect on ranch profits. Several breed associations are working on ways to quantify and compare a few economically relevant traits (ERTs). These are traits that directly affect profits.

There are two relatively new ERTs that everyone at Pharo Cattle Company is extremely excited about. They predict the amount of energy required by mature cows to maintain body weight. We've known for many, many years that this is something that can have a tremendous impact on ranch profits.

The Angus Association has created a Cow Energy Value (\$EN) EPD. The higher the number the better. The Red Angus Association has a similar EPD called the Maintenance Energy (ME) EPD. The lower the number the better.

Nearly all the bulls promoted by the big-name AI companies and mainstream seedstock producers literally stink in the area of cow energy requirements. They have way too much milk, growth and size to fit in a real-world, commercial ranch environment. In contrast, nearly all of the genetics used by Pharo Cattle Company excel in this area — REALLY excel!

Cow Longevity

How can you identify the most efficient and most profitable cows in a cowherd? The answer is so simple that most people miss it. The most efficient and profitable cows in an unpampered cowherd will always be the oldest cows. These are cows that have done everything right without missing for at least twelve years.

Honest, unpampered, teenage cows have addressed all of the issues relative to fertility, energy requirements, frame size, production, structural soundness, mothering ability and disposition. These are time-proven cows that can seldom be improved upon.

Cow longevity is the most important trait to select for because it encompasses all of the other important maternal traits. We have devised a formula, based on all the cows in a 4-generation pedigree, to calculate a longevity score for all of the registered bulls in this sale. Scores range from 1 to 5 stars, with 5 being the very best.

Our formula may not be perfect, but it allows us to determine which bulls are most likely to produce daughters that will keep going and going and going. In time, we will probably make slight adjustments to our formula.

Quick-Sort Program

We now have the ability to help you quickly sort out the bulls that fit your wants and needs. This program will save you hours and hours of time and frustration.

We have an easy, do-it-yourself version available in our online (internet) catalog. Just enter the criteria you want to sort for, and before you can go get a cup of coffee the sorting will be completed. If you prefer, we can do the sorting for you. Call us at **800-311-0995**.

We suggest you DON'T select for any more criteria than absolutely necessary — unless you have an unlimited bull-buying budget. If your budget has some limits, however, we strongly urge you to keep your list of potential bulls as long as possible. Please keep in mind that more is NOT always better.

Sorting Criteria

- Breed
- Sire
- Base Price
- Registered or Not
- Age
- Frame Size
- Disposition
- Calving Ease
- Overall Rating
- Fleshing Ability
- Thickness Score
- Muscling Score
- Masculinity Score
- Grass Efficiency Score
- Hair Coat Score
- Fly Resistance Score
- Scrotal Circ.
- Marbling Ratio
- Tenderness Score
- High Altitude Score
- Dam Udder Score
- Dam Age

NO ONE ELSE provides as much useful information as we do.

Call us at 800-311-0995

If we are unable to help you with your Quick Sort, we'll give you \$1000 to use toward your bull purchase.

Grass Efficiency

We've come to the conclusion that our grass efficiency score may be the most important score for cow-calf producers to select for. What is grass efficiency? Johan Zietsman, a rancher/consultant from Zimbabwe, says, "*Grass-efficient animals will look like eight pounds of sugar in a 5-pound sack.*" In other words, they can put a tremendous amount of weight in a relatively small package.

For the most part, the formula we use to score grass efficiency is based on early maturity. Early maturity is of utmost importance to cow-calf producers. Unfortunately, the status quo beef industry's incessant selection for more and more lean growth for the past 50 years has had a very detrimental effect on early maturity. When sexual maturity takes place, muscle and skeletal growth slow down and the animal is able to start storing up energy in the form of fat. Fat deposition is critical to reproduction.

Based on university research, we are able to use the adjusted hip height of young bulls to predict their mature weight at a body condition score of 5. An animal that is 60% of its predicted mature weight is better than one that is 50% of its predicted mature weight. Bulls with a 4+ or 5-star rating for grass efficiency will be the very best at producing early-maturing, highly-fertile, long-lasting replacement females. They will also be the very best at producing steers that will excel in a grassfed beef program.

Hair Coat

Hair coat is an excellent indicator of animal health and well-being. A healthy beef animal will have a vibrant-looking hair coat — slick and shiny in the summer and cuddly-looking in the winter. In contrast, an unhealthy beef animal will have a dull, dead-looking hair coat.

An animal's ability to shed off early in the spring is another very good indicator of health and well-being. The late Jan Bonsma had much to say about this subject. Among other things, he said, "In selecting livestock for functional efficiency there is no single factor which can give such positive results as early hair shedding. Animals can shed their hair early in the spring only if they are well adapted to their environment, are in good nutritional status, and have the correct hormonal balance."

We have been observing and scoring hair coat for many years. The fall of 2006, though, was the first time we put hair coat scores in a sale catalog. A 5-star hair coat is as good as they get. A 3-star hair coat is about average. If you live in a relatively hot and/or humid environment, hair coat is a trait you should pay special attention to. Bulls with a 4 or 5 star hair coat should work well in the south and southeast.

Fleshing Ability

The bulls in this catalog have all been rated for fleshing ability. Simply put, this is the animal's ability to put on and maintain good body condition, even with a limited amount of feed. When feed is plentiful they will rapidly improve their condition. Later this extra condition can serve as a reserve to help the animal survive the tougher times.

Over the years, we have noticed that our easy fleshing cows seem to breed back earlier and stay in the cowherd much longer than our hard-keeping cows. There appears to be an extremely high correlation between fertility and fleshing ability. Therefore, fleshing ability has become one of the most important economic traits we select for. Hard-keeping cows will eventually fail to breed back in a program as tough as ours. Fleshing ability is a trait that needs to be bred in — NOT fed in.

Easy-fleshing bulls should sire daughters that are easy-fleshing. Our sale bulls are rated with 1 to 5 "stars" for fleshing ability, with "5" being the best. We believe you should pay special attention to this trait if you are raising your own replacement females.

Disposition

Poor disposition in a cowherd can be created by rough handling, but it is also very heritable! A bull with a bad disposition will not only cause problems himself, he will also sire replacement females with similar disposition problems. Before you know it, your entire cowherd will become much more difficult to handle and work with.

At calving we give each cow a score for disposition, from 1 to 5. If there is a problem, we eliminate it. We want a momma cow that is protective and concerned about her new baby, but not to the point that she creates a hazard to our health. Every time our cattle are sorted or run through the chute we monitor and record disposition problems. We will not tolerate cattle that are nervous, wild or hard to handle.

All of our bulls have been put through a simple test that allows us to give them a score for disposition, from 1 to 5. We sort each bull off by himself in an alley and crowd him between two people. This measures the bull's comfort zone, as well as his disposition. A bull that will stand calmly, with no signs of excitement or nervousness, will receive a high score. If a bull gets nervous and tries to run past us he will receive a low score. Each bull is rated with 1 to 5 "stars", with "5" being the best. Many of our customers say our 3-star disposition bulls are better than the bulls they've been purchasing from programs. However, if you are only purchasing one bull, we suggest you purchase bulls with a 3+ or better disposition.

The Traits We Evaluate...

...and Score

From the very beginning, Pharo Cattle Company has been evaluating and scoring bulls for a variety of traits — traits that most seedstock producers have never even considered. Suffice it to say, we are *Different for all the Right Reasons*. Each bull is individually sorted off and evaluated by four to six people in a 12-foot sorting alley. A rating of “5” is best, with a “3” being average. Below are the traits we evaluate and score — as well as what we are looking for. Scores for some of these traits can only be found by using our unique Quick Sort program (see page 10).

From the very beginning, Pharo Cattle Company has been evaluating and scoring bulls for a variety of traits — traits that most seedstock producers have never even considered. Suffice it to say, we are *Different for all the Right Reasons*. Each bull is individually sorted off and evaluated by four to six people in a 12-foot sorting alley. A rating of “5” is best, with a “3” being average. Below are the traits we evaluate and score — as well as what we are looking for. Scores for some of these traits can only be found by using our unique Quick Sort program (see page 10).

- **Fleshing Ability...** The amount of condition (fat) that a bull carries under his hide. While some bulls are able to get fat on limited feed resources, others do good just to hold their own. For the most part, we use the ultrasound measurement for back fat thickness to score this trait.
- **Thickness...** This is basically a measurement of depth and width. It has little to do with muscling. What we are looking for is the most pounds for every inch of height. High-volume animals with a lot of heart girth are the type required for low-input, grass-based programs.
- **Muscling...** Since we’re in the beef business, we need animals with substantial muscling. The best place to look for natural muscling is in the twist area (between the rear legs). Light-muscled animals are narrow and cut up high in the twist. In contrast, heavy-muscled animals are deep and wide in the twist.
- **Masculinity...** A bull should look like a bull — and the sooner he does, the better. For the most part, we are looking for the presence or absence of secondary sexual characteristics. The neck and the head are the best places to look. We like a bull with a thick, wide neck that has a very pronounced crest on top. Bulls also need to have a “bull” head — not a “cow” head.
- **Overall Rating...** This is overall visual appearance or eye appeal. While some bulls are extremely attractive, others are very plain in appearance. The most attractive bulls will usually have high scores for most of the other traits we evaluate and score — but not always.
- **Hair Coat...** Healthy, well-adapted bulls will have a lively looking hair coat year-round. During the winter months, the hair should have a soft “teddy bear” look and feel to it. In the summer, the hair coat should be short, slick and shiny — shiny enough to almost see your reflection. The presence of dull, dead hair will lower the hair coat score.
- **Fly Resistance...** This is not as difficult to evaluate and score as some think. We simply assess how many flies each bull has. There is often a big difference between bulls within the same herd. While a few bulls are black with flies, others will have very few flies. In the cool morning hours, flies will be on the animal’s back. As the day warms up, the flies will move to the shaded areas of the belly and legs.
- **Disposition...** Disposition is the last thing we evaluate and score. It is important for a bull to be separated from his herd mates for an extended period of time before we can accurately evaluate his disposition. As you are evaluating the bull for other traits, his disposition (good or bad) will begin to express itself. We like to crowd the bull from both sides to test his flight zone. Bulls that remain very calm receive a high disposition score — while those that show signs of fear, nervousness and/or aggression will receive a low score.

Why Don't All Seedstock Producers...

- **Treat their cows tougher than you treat your cows?**
- **Refuse to make an excuse for a cow, or give her a second chance?**
- **Develop bulls on forage — with nothing but starch-free supplements?**
- **Evaluate and score bulls for disposition?**
- **Evaluate and score bulls for hair coat and fly resistance?**
- **Evaluate and score bulls for feet and leg conformation?**
- **Evaluate and score bulls for preputial prolapse problems?**
- **Evaluate and score bulls for fleshing ability, thickness, muscling and masculinity?**
- **Evaluate and score bulls for grass efficiency, cow longevity and maintenance?**
- **Provide an udder score for the bulls they sell?**
- **Provide a One-Year Guarantee on the bulls they sell?**
- **Guarantee bulls for calving ease?**
- **Provide ultrasound data on the bulls they sell?**
- **Control flies and other parasites with genetics — instead of chemicals?**
- **Invite customers to participate in bull evaluation days?**
- **Provide a Quick Sort program that takes the guesswork out of selecting bulls?**
- **Use an honest, low-pressure Cowboy Auction to sell bulls?**
- **Deliver bulls to over 60 delivery points across the nation?**
- **Provide an online discussion group with world-renowned industry experts?**

Texas Bull Sale

**Monday, April 5, 2021
1:00 PM (Central Time)
20645 N. I-35
West, Texas**

We have cataloged **105** bulls for our Texas Bull Sale. All of these bulls were developed on grass — with some hay and non-starch supplement. We want these bulls to be big enough to go to work, but we do not want them to be excessively fat. We expect them to gain weight during their first breeding season. They are all fall-born, coming two-year-old bulls. At the top of each page, it will say which breed is cataloged on that page. Bulls will sell in lot order.

38 Red Angus

28 Angus

26 Heat-Tolerant Composite

13 Polled Hereford

Texas Bull Delivery . . .

We are offering 4 FREE Delivery Points and 5 very Afforda-BULL Delivery Points from our Texas sale. For \$250 above the posted price, any bull purchased in our Texas Sale can be delivered to any of the delivery points on Page 43. Those bulls will be delivered following the Missouri Sale. For \$350 above the posted price, any bull purchased in our Texas Sale can be delivered to any of the delivery points on Page 85. Those bulls will be delivered following the Colorado Sale.

Contact Pharo Cattle Company prior to the sale for specific delivery instructions for your location. If you plan to take advantage of our bull delivery service, you **must** notify PCC **before** the sale or when you clerk out **at** the sale as to which delivery point you want to use. If you don't, your bull will miss his ride and you will have to come get him. Delivery is scheduled to begin the day after the sale. We will call you when we have your transportation lined up.

To address liability issues, we require that our **Basic 30-Day Warranty** be purchased on all bulls being transported to these delivery points. The cost of this coverage is 2% of the purchase price. See page 6 for more details.

For the last five years, we have been experimenting with several different breeds and breed combinations to come up with some excellent genetic solutions to heat stress. The one thing we want to minimize is the use of Brahman genetics. Although Brahman cattle excel in heat tolerance, they are too big and inefficient to fit our low-input program. Brahman and Brahman-cross cattle also lack fertility, which is the most important economic trait for cow-calf producers. Two more problems with Brahman-cross cattle are disposition and carcass quality.

For the most part, we are experimenting with Bos Taurus breeds of cattle that have Spanish and/or African origins. These include Mashona, Creollo, Romosinuano, Tuli, Senepol and South Poll. Although we are working with some purebred tropical cattle, we much prefer to create composite breeds that are the result of using our thick, easy-fleshing, moderate-sized Red Angus cattle as the base. The resulting composite cattle have a much more acceptable and marketable appearance.

For over 20 years, we have had slick-haired Angus, Red Angus and Polled Hereford cattle working in hot, humid environments. We now have some Heat-Tolerant Composite cattle that work even better.

Missouri Bull Sale

**Thursday, April 8, 2021
1:00 PM (Central Time)
6821 W Independence Dr.
Springfield, Missouri**

We have cataloged **180** bulls for our Missouri Bull Sale. All of these bulls were developed on grass — with some hay and non-starch supplement. We want these bulls to be big enough to go to work, but we do not want them to be excessively fat. We expect them to gain weight during their first breeding season. They are all fall-born, coming two-year-old bulls. At the top of each page, it will say which breed is cataloged on that page. Bulls will sell in lot order.

88 Red Angus

72 Angus

7 Heat-Tolerant Composite

11 Polled Hereford

1 Black-Hided Red Angus

Missouri Bull Delivery . . .

We are offering 3 FREE Delivery Points and 10 very Afforda-BULL Delivery Points from our Missouri Sale. For \$250 above the posted price, any bull purchased in our Missouri Sale can be delivered to any of the delivery points on Page 85. Those bulls will be delivered following the Colorado Sale.

Contact Pharo Cattle Company prior to the sale for specific delivery instructions for your location. If you plan to take advantage of our bull delivery service, you **must** notify PCC **before** the sale or when you clerk out **at** the sale as to which delivery point you want to use. If you don't, your bull will miss his ride and you will have to come get him. Delivery is scheduled to begin the day after the sale. We will call you when we have your transportation lined up.

To address liability issues, we require that our **Basic 30-Day Warranty** be purchased on all bulls being transported to these delivery points. The cost of this coverage is 2% of the purchase price. See page 6 for more details.

"Since I am in the grass-fed beef business, the eating quality of my beef product is paramount. We continue to receive positive comments on the beef quality from our customers and we also can tell the difference in the meat from calves sired by your bull. Also, when we process calves from your bull the processing facility consistently notes that our carcass quality is higher visually than what they are used to seeing. When we call the processors they comment that the quality of our beef is noticeably better than they see from other producers."

Mike Greene — Arkansas

For the last five years, we have been experimenting with several different breeds and breed combinations to come up with some excellent genetic solutions to heat stress. The one thing we want to minimize is the use of Brahman genetics. Although Brahman cattle excel in heat tolerance, they are too big and inefficient to fit our low-input program. Brahman and Brahman-cross cattle also lack fertility, which is the most important economic trait for cow-calf producers. Two more problems with Brahman-cross cattle are disposition and carcass quality.

For the most part, we are experimenting with Bos Taurus breeds of cattle that have Spanish and/or African origins. These include Mashona, Creollo, Romosinuano, Tuli, Senepol and South Poll. Although we are working with some purebred tropical cattle, we much prefer to create composite breeds that are the result of using our thick, easy-fleshing, moderate-sized Red Angus cattle as the base. The resulting composite cattle have a much more acceptable and marketable appearance.

For over 20 years, we have had slick-haired Angus, Red Angus and Polled Hereford cattle working in hot, humid environments. We now have some Heat-Tolerant Composite cattle that work even better.

Comments: ♦ Mat. 1/2 brother sold to Dixon Law (WV) for \$6000		
♦ Guaranteed calving ease — birth weight EPD in top 4%		
♦ Outstanding ultrasound data for marbling and tenderness		
♦ No tail switch — guaranteed not to be a problem		

Colorado Bull Sale

**Monday, April 19, 2021
12:00 Noon (Mountain Time)
46277 US Hwy 24
Burlington, Colorado**

We have cataloged **231** bulls for our Colorado Bull Sale. All of these bulls are yearlings that were developed on hay at PCC Headquarters with a moderate amount of non-starch supplement (mostly soy hulls). We want these bulls to be big enough to go to work — but we do not want them to be excessively fat. We expect them to gain weight during their first breeding season. At the top of each page it will say which breed is cataloged on that particular page. Bulls will sell in lot order.

142 Angus

83 Red Angus

5 Angus & Red Angus Cross

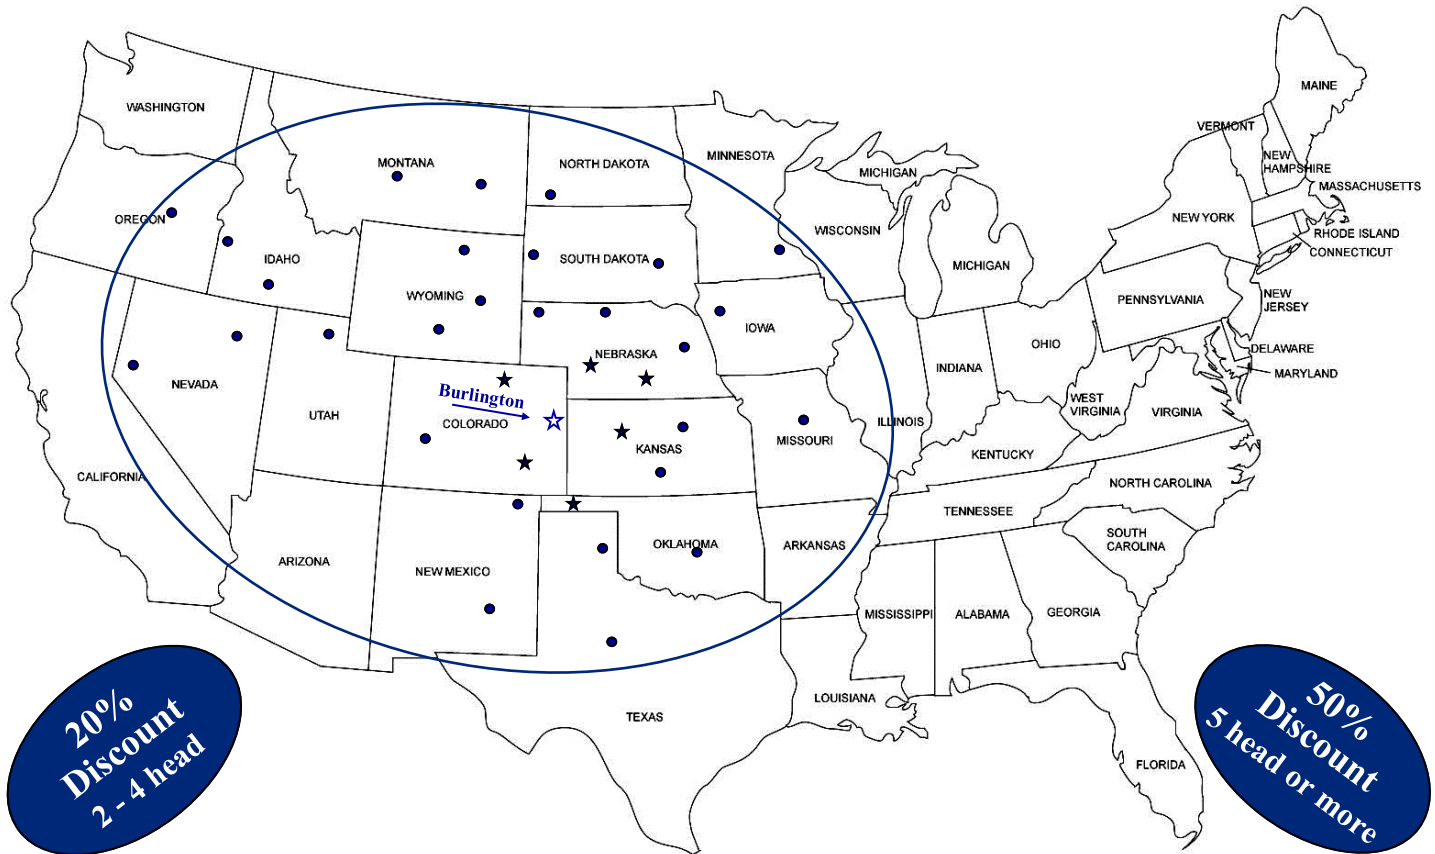

1 Black-Hided Red Angus

Colorado Bull Delivery . . .

We are offering 6 FREE Delivery Points and 28 very Afford-a-BULL Delivery Points from our Colorado Sale. Contact Pharo Cattle Company prior to the sale for specific delivery instructions for your location. If you plan to take advantage of our bull delivery service, you **must** notify PCC **before** the sale or when you clerk out **at** the sale as to which delivery point you want to use. If you don't, your bull will miss his ride and you will have to come get him. Delivery is scheduled to begin the day after the sale. We will call you when we have your transportation lined up.

To address liability issues, we require that our **Basic 30-Day Warranty** be purchased on all bulls being transported to these delivery points. The cost of this coverage is 2% of the purchase price. See page 6 for more details.

Getting Your Money's Worth...

When purchasing bulls, cost is always a factor — but it should not be the only factor. First and foremost, you should consider the program behind the bulls. Bulls that are produced in a program that aligns with your long-term goals are worth a whole lot more than bulls coming out of a program that does not align with your long-term goals.

It is unfortunate, but most bull programs do not align with any commercial cow-calf operations. Most bull programs are high-input operations with big, inefficient cows that require substantial pampering just to stay in production. I just heard of an extremely high-input outfit that sold over 400 overfed Diesel Bulls for an average price of over \$14,000. Unbelievable! Why would anyone pay so much for a bull that is guaranteed to fall apart?

Another very important factor in getting your money's worth is the number of calves a bull will sire before he must be replaced. It doesn't take a rocket scientist to figure out that a bull that sires twice as many calves as the average bull is worth twice as much as the average bull. After all, the reason you purchase bulls is to sire calves.

According to many university experts, you can only expect to get three years of use out of a high-maintenance, feedlot-developed Diesel Bull. On average, I think that is too high. Even with supplementation, most Diesel Bulls can service no more than 20 cows their first year and no more than 30 cows their second and third years — for a lifetime total of 80 calves.

It is not at all uncommon for low-maintenance PCC Solar Bulls that are developed *without* grain to provide at least six years of service. In most cases, we are not afraid to turn our Solar Bulls out with 30+ females their first breeding season. We expect our bulls to gain weight during their first breeding season — *without* being supplemented. Our mature bulls can handle 50+ cows — for a lifetime total of at least 280 calves.

In this case... the PCC Solar Bull sired 200 more calves than the status quo Diesel Bull. If the Diesel Bull cost \$4000, his cost per calf would be \$50. At \$50 per calf, you could have paid as much as \$14,000 for the PCC Solar Bull, and still be getting your money's worth. Since PCC Solar Bulls cost about the same as Diesel Bulls, you will almost always get *MORE THAN YOUR MONEY'S WORTH* with a PCC Solar Bull.

Cowboy Logic: "Real cowboys don't take baths. They just dust off."

Dare to be a Herd Quitter

You can no longer afford to follow the status-quo herd of high-input, unsustainable agriculture

Ultrasound Data Explained . . .

Masculinity, Nutrition — and Bull IMF

By Allen R. Williams, Ph.D.

For over a decade there has been confusion among cattlemen regarding the results of live animal carcass ultrasound and how to interpret data collected between seedstock producers. In no trait is this confusion more notable than with % IMF (intramuscular fat). This particular trait measurement is heavily impacted by several factors, including bull masculinity, degree of nutrition and bull activity (related to masculinity). These factors can greatly impact the degree to which IMF is expressed — although they do not, in any way, change the genetic potential.

Bull Masculinity and Activity

Bull masculinity and degree of testicular development clearly impact the expression and ultrasonic measurement of IMF. It is important to remember that the male sex hormone testosterone is a potent IMF inhibitor. In over a decade of collecting ultrasound IMF measurements on yearling to long yearling bulls, it has become very apparent that the level of masculinity and testicular development plays a significant role in the magnitude of the ultrasound IMF measurements. In other words, bulls that are thick-muscled, exhibiting signs of heavy development of secondary sex characteristics (crest to the neck, heavy shoulders, etc.) and have good to excellent testicular development will have IMF measurements that are biased downwards due to the inhibitory effect of testosterone. Statistical analysis of IMF data, coupled with scrotal circumference data, clearly indicates a significant negative correlation between bull masculinity and actual IMF. What this means is that in many instances (not all), bulls that have a very high ultrasound IMF are often not very masculine bulls. The lower testosterone activity in these bulls allows for greater phenotypic expression of IMF, but does not give a true picture of the IMF genetic potential as compared to the very masculine bulls.

Bull Nutrition

Level of nutrition leading up to the yearling stage greatly impacts expression of IMF. It has long been known that bulls developed on high concentrate rations will exhibit a higher magnitude of IMF deposition, at the same age, than bulls developed on lower concentrate or forage rations. That is one of the reasons most seedstock operations develop bulls on 50% or greater concentrate rations. The bulls gain quite a bit of condition (backfat) and lay down a higher level of intramuscular fat. Fat, slick bulls appeal to a lot of bull buyers. The problem is, you often don't know what you are really buying because fat covers over a lot of faults and can give a very false impression of actual fleshing ability. Bull buyers also like to see high ultrasound IMF scores. Again, this can lead to misinterpretation by mistaking IMF due to high concentrate feeding with actual genetic potential for IMF. Bulls can only lay down IMF to the degree to which their nutritional environment will allow. Therefore, just as with bull masculinity and activity, it is important to compare bulls within contemporary groups only and not from ranch to ranch.

PCC Bulls

In the case of the PCC bulls, it is evident that many of these bulls are thick, heavily-developed bulls that exhibit a high degree of masculinity at 12-18 months of age. This masculinity, in and of itself, will inhibit phenotypic expression of IMF. Couple masculinity with high levels of activity — and then consider the fact that these bulls have not been fed a high-concentrate ration. Therefore, it is important that these bulls be compared for their genetic potential for IMF — not for the magnitude of their actual IMF measurements.

I have analyzed actual carcass data from progeny produced from many of the prominent bloodlines utilized within PCC seedstock, and the results clearly show that there is true genetic potential for marbling or IMF. The majority of the progeny sired by these genetics will produce grass-fed and grain-fed cattle that grade USDA low Choice or better at harvest.

Ultrasound Data Explained . . .

The live animal carcass ultrasound used by Dr. Allen Williams and his associates is an automated, chute-side software system that captures images and calculates trait measurements on an objective basis. The traits determined by this ultrasound software are:

- **Back Fat Thickness**
- **Ribeye Shape Score**
- **Ribeye Area (REA)**
- **Ribeye Area/Hundred Weight (REA/CWT)**
- **Percent Intramuscular Fat Ratio (% IMF RATIO)**
- **Tenderness Score**

On this and the following several pages, we have posted these measurements and scores for all of the bulls in this sale — by sale and lot number.

Ribeye Shape Score: This score is indicative of desired shape of the ribeye muscle. It is correlated to gain efficiency, as well as to eventual yield grade, cutability, and % retail product. The score ranges from 0.0 to 1.0, with an acceptable score being 0.35 or greater. An ideal score is 0.50 or greater.

Tenderness Score: This score is correlated to the actual Warner-Bratzler Shear Force in a carcass ribeye steak at the 12th rib location. This score ranges from 10-50, with 20 being very tender, 30 being slightly tender, 40 being slightly tough, and 50 being tough. An ideal score is 25 or less, but 29 or less is considered acceptable in bulls.

Back Fat and Intramuscular Fat are affected by environment and feed consumption. The fact that these bulls were being run in different groups is somewhat evident by the amount of variation that exists for fat thickness and marbling. With this in mind, our ultrasound technician shaded in the scores and measurements that he would consider to be “top-sort”. Those shaded blue are considered the best scores, and those shaded tan are the next best. For more help in using this information, feel free to call Clay Nash at **870-897-3167**.

Cowboy Logic: "The human mind treats a new idea the same way the body treats a strange protein. It rejects it!"

Cooperator Herds

Pharo Cattle Company is much more than one family and one ranch. In reality, we could be described as a multi-family owned and operated seedstock producer.

The demand for Pharo Cattle Company bulls has increased tremendously over the past several years. In order to meet this demand and to keep our prices affordable, we thought it necessary to increase the number of bulls offered in our annual bull sales. This task is not as easy as it sounds because we refuse to sacrifice quality for quantity!

The Solution. Over the years our seedstock program has evolved into a network of

outstanding cooperative producers. We've been able to increase our numbers, without sacrificing quality, by selecting the best bull calves from several select cooperator herds. I'm referring to producers who have philosophies, genetics, and breeding programs very similar to our own. For the most part, these are breeders we have been working very closely with for several years.

Biographies for all of our cooperative producers can be found on the next few pages. These producers have signed a contract with Pharo Cattle Company. In so doing, they have agreed to abide by some strict guidelines, including the following philosophies.

Philosophies Behind Our Bulls

1. **Honesty and integrity will never be compromised.**
2. **We will manage the natural resources placed under our control in a sustainable manner.**
3. **The breed of cattle is not nearly as important as the breeding program and the philosophies that produce the cattle.**
4. **Cows are run in a real-world environment, as tough or tougher than the environment most commercial cows are run in.**
5. **We let the environment sort out the good ones, while we show absolutely no sympathy for open, late, or dry cows.**
6. **We will never make an excuse for a cow. A cow must produce and wean a calf every year to remain in the herd.**
7. **By limiting feed resources, we try to apply sufficient pressure on the cowherd to force out the unadapted and infertile animals — at least 10 percent each year.**
8. **In addition to growth and performance, we select for some other vital economic traits like fertility, calving ease, moderate cow size, fleshing ability, structural correctness, disposition, and longevity.**
9. **Replacement heifers are developed on a low-cost, forage-based diet with minimum supplements. We only want the most efficient and most adapted heifers to make it into the cowherd.**
10. **A bull calf must be born unassisted from an efficient, moderate-sized cow that has never missed in order to make it into one of our bull sales.**

Bull Selection. When we go into these cooperative herds we are extremely selective. Performance is important, but we also select for calving ease, structural correctness, disposition, fleshing ability and thickness. In addition to all this, we require that the bulls' mothers be efficient,

moderate-sized cows that have never been pampered. We can't afford to make any mistakes because our reputation is at stake. We only want the best of the best! As time goes on, and as these herds improve we have been able to select more and more of their bulls for our program.

Meet The Breeders

4-P — 4-P Farms

Rod grew up as a farm boy in Eastern Colorado, and always saw farming in his future. After marrying the girl next door (Kit's sister, Kathy), he became familiar with Pharo Cattle Company's philosophies. Rod and Kathy run a small herd of registered Angus, keeping only the "best of the best" cows, i.e., those that know how to work for a living. Rod also serves as a Colorado State Representative and Kathy manages the bull data for PCC. Rod and Kathy Pelton, phone 719-342-1864 or email rodpelton@rebeltec.net.

83R — 1883 Ranch

1883 Ranch got its start in 2019, but our roots run much deeper than that. Rufus Seth Reed Munger homesteaded in Keya Paha County, NE in 1883. Currently owned and operated by Brian & Jill Munger (5th generation) with the heavy involvement of the 6th generation: Ethan, Kylin, Colton, Keely, Kortney, and Shane, our ranch has survived the test of time and we want you to know that we are in this for the long haul. If you find yourself roaming through the Sandhills of Nebraska, stop in for a cold glass of tea or a hot cup of coffee! Brian & Jill Munger, phone 402-497-3607 (home), or 402-382-8814 (Brian Cell), or email bjmunger@threeriver.net.

ACT — Agape Cattle Company

Lone Oak Ranch was part of an original Spanish land grant in 1832. Our focus is on land stewardship, and we use rotational, high-density grazing to maintain healthy forages that result in healthy cattle. We are constantly working on improving our soil carbon levels, expanding ground cover, and increasing soil rainwater absorption. PCC genetics fit perfectly into our grain-free operation and we're proud to be a Cooperative Producer. Go to www.agapecattleco.com. Call Woody at 214-679-7737 or email woody@wtw-us.com or Roger Linn, phone 214-437-7844 or email rlinn1@yahoo.com.

BA — Bruns Angus

Bruns Angus is owned and operated by Kirk and Kristi Bruns, along with our children Kara, Paige and Ben. Our moderate-framed Black Angus cows are well-adapted to our low-input environment. We calve in May and June, using rotational grazing in the summer and stockpile or bale grazing in the winter. We appreciate the opportunity to market our bulls with Pharo Cattle Company. Visitors are welcome any time, as seeing is believing. Kirk and Kristi Bruns, phone 402-841-3671 or email kbruns63@yahoo.com.

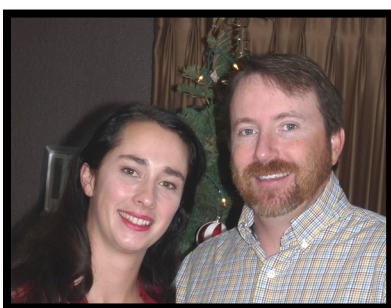

Meet The Breeders

BSR — Bar S Ranch

The Bar S Ranch is located near Edson, Kansas and is owned by Riley and Kelsey Shay. Riley grew up involved in PCC from an early age through his parents' ranch, raising Black Angus cattle. We bought our first Red Angus cows in 2013. We are delighted to work with Pharo Cattle Company and our goal is to produce low-input, moderate-framed cows with calving ease and fleshing ability. Please feel free to contact us, we would be happy to visit with you. Riley and Kelsey Shay, phone 785-694-2910 (home), 785-694-8300 (cell), website www.the-sranch.com or email mail@the-sranch.com

CTM — McDaniel Farms

We have been raising Red Angus since 1997. Producing cattle that require few inputs and calve easy is far more enjoyable (and logical) than spending time and money accommodating inefficient cows. We raise the right kind of cattle — self-sufficient, moderate-framed, and easy-fleshing cows that pass these traits on to their calves. Our biggest asset is the privilege of working with Pharo Cattle Company and all of the other like-minded producers that we appreciate so much. Find us at mcdanielranch.com, <https://twitter.com/codymcdaniel>, and <https://mcdanielranch.wordpress.com>. Cody and Tancy McDaniel, phone 406-266-3909 (home) or 785-694-3244 (cell) or email mcdanielcattle@gmail.com.

D-7 — D Bar 7 Ranch

We started out as commercial producers, and realized how tough it is to find bulls raised by low-input cows. In time, we encountered Kit Pharo and found that his philosophies really resonated with us. As seedstock producers, we focus on developing easy-fleshing, good-uddered, slick-haired cows that are productive on fescue pastures in the heat and humidity of Missouri. We feel fortunate to be associated with PCC and its progressive group of Cooperative Producers. Al and Debb DeWit, phone 918-915-0909 or email aldewit72@gmail.com.

DC — Dry Creek Red Angus

Dry Creek Red Angus, located near Goodhue Minnesota, is owned and operated by 2 generations of Luhmans. Jon and Terri along with Jared and Valarie make up the Dry Creek team that is focusing on improving the land that God has allowed us to manage. We breed cattle that thrive in our natural environment and take full advantage of our forage only program. We feel fortunate to be able to work with PCC in producing low maintenance, profit making seedstock and welcome you to come and visit. Contact Jon 651-380-9635 (cell) and jdluhman@hotmail.com or Jared 507-271-5968 (cell) and jared.luhman@gmail.com.

Meet The Breeders

D-J — David Johnson

Our family has been developing Angus cows in southern Missouri's fescue country. We have selected for traits that work in our heat and humidity. Improving our grazing resources is a priority. Animal health and soil health and diversity of forages are among these ideas. We are focused on the genetics required in our environment because we believe if the cattle can perform here, they can thrive in most other environments. We are fortunate to be working with PCC as we approach another decade of challenges and exciting ideas. David Johnson and family 573-247-0164 (cell) or 573-729-4388 (home) or email Dbjodc@gmail.com.

FSR — Flying S Ranch

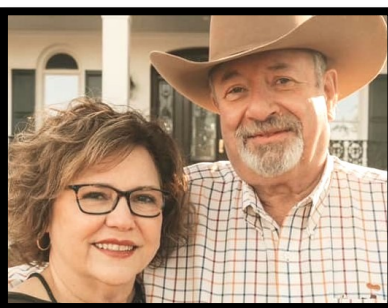

Diane and I have run a low-input Angus herd since 1994, and we are proud to carry on my father's tradition of producing only the best cattle and horses. Our cows calve on Republican River bottom grass in March and April, with a minimum amount of harvested forage. They graze native grass in the summer and fall, and winter on corn stalks. Please give us a call or stop by to see us anytime. Ryan and Diane Shay, phone 785-332-3209 (home) or 785-332-5588 (cell) or email ryan@flyingsranch.com.

GMJ — GMJ Cattle Farm

Our program was started by the patriarch of our family, Glendon Spigner, and carried forward by Jason and Margaret Spigner after his passing. We have focused on registered Angus since 1990, producing medium-framed, low-maintenance cattle that can thrive in Mississippi's brutally hot and humid summers. We are pleased to be Pharo Cattle Company Cooperative Producers, and hope to continue in this role for years to come. Margaret Spigner, phone 662-862-9592 (home) or 662-401-7423 (cell) or email spigner@nexband.com or Jason Spigner, phone 662-862-6929 (home) or 662-255-7937 (cell) or j.s.spigner@gmail.com.

JJS — Summerford Cattle Company

Summerford Cattle Company is located in Ashford, AL, is owned by John and Pam Summerford and raises Red and Black Angus. Being in Southeast AL, our environment consists of extreme heat, high humidity and washy grass. We began our transition to the PCC way of sustainable ranching in 2013 by buying our first PCC bull and moving to April-May calving. Since then we have seen our company make great strides towards the more sustainable and enjoyable form of cattle ranching. I am humble and thankful to be a part of the PCC Cooperative Producer network and its vast wealth of knowledge. John Summerford, phone 334-797-1391 or email jjs@summerford.com.

Meet The Breeders

LCC — Lost Creek Cattle

Sean and Kat formed Lost Creek Cattle Company in 2010 when they purchased the home quarter. Our cows have been selected to thrive on an all forage diet, and it has been the leading factor in our ability to finish cattle on grass. We have recently begun to sell pasture finished beef. We run on a combination of native and tame pastures in SW North Dakota. The bulls that we sell will help your operation by providing offspring that are easy fleshing, low maintenance animals that will thrive on your forage. Sean and Kat Weinert, phone 701-567-6635, Instagram @lostcreekcattle, website www.lostcreekcattleco.com or email lostcreekcattle@hotmail.com.

N-K — N-K Angus

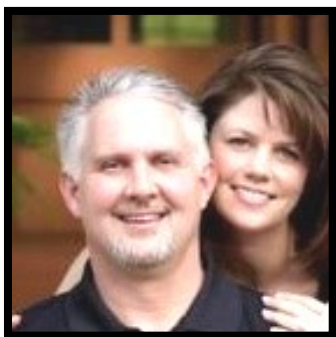

At N-K Angus, a mix of prairie, creeks, and timber provide a great environment for our cow-calf operation. We raise all species of livestock with a holistic approach utilizing rotational grazing of cool season and fescue grasses. Pharo Cattle Company genetics, smart grass management, and calving in sync with nature = more profit and more fun! To us, being part of the PCC network is a privilege. Phil and Linda Wertenberger, 785-284-3258 (home) 785-285-0079 (cell) or email nkangus@bbwi.net.

OAR — Orton Angus Ranch

Orton Angus Ranch is owned by Jason and Chana Orton. Our daughter, Caitlin, and son, Raden, also have important roles in the operation. We purchased our first registered cows from Bruns Angus in 2017. Our ranch is located in north central Nebraska, just north of the Niobrara River on the edge of the Sandhills. We calve in May and June using rotational grazing in the summer and fall. The cattle graze mostly sub-irrigated meadows with some bale grazing in the winter. Jason and Chana Orton, phone 402-244-5264 or email chanaorton@gmail.com.

OH & OHN — Ozark Hills Genetics

Ozark Hills Genetics started in 1993 as a partnership between Jerry Hall and his son David. Our commercial cow-calf operation gradually turned into a purebred Red Angus ranch. These red cows are our passion and we are very proud of them. The "relentless pursuit of fertility, performance, and longevity" is the phrase that best describes what we do. Call anytime, or better yet, come and visit. We'd love to show you some good red cows and southern hospitality! David Hall, phone 417-293-1072 or email david@ozarkhillsgenetics.com.

Meet The Breeders

PAR — Pulliam Angus Ranch

Pulliam Angus is located in the mountains near Montrose, Colorado. Robert and Gina manage a commercial Angus herd at Buckhorn Mountain Ranch with sons Nathan, Jason and his wife Rachel. We also manage a private herd of Registered Angus. Pharo bulls changed everything for us, producing moderate frame, low maintenance, fertility, and calving ease as promised. We are excited for the opportunity to join PCC and hope to supply some high altitude PAP tested Angus for other producers. Robert Pulliam, phone 970-240-8704 or email rp@buckhornmountain.com.

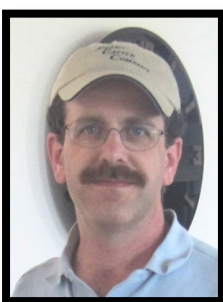

PCC — Pharo Cattle Company

The “PCC” prefix (by itself) is used to identify bulls produced by cows owned by Kit and Tyson Pharo. Some of these cows are located at PCC Headquarters in Cheyenne Wells, while others are placed in Cooperator Herds around the country. You will see the PCC prefix on Angus, Red Angus and Composite bulls. If you are passing through, we would love to give you a personal tour of our ranch and cattle. You can contact us by calling 800-311-0995 or emailing bulls@pharocattle.com.

P-L — Landrigan Livestock

Love of the cow-calf business and a ruthless practicality combined with a sense of genetic responsibility are the motivators at Landrigan Livestock. The cow test is simple: calve annually in a least cost environment. Earmarks of our herd are ease of maintenance, trouble-free calving, docility, longevity, and winter forage hardiness. Our range management practices are aimed at harvesting forage as well as improving the quality of life above and below the soil surface. Paul and Janet Landrigan, phone 308-870-2411 or email pjlandrigan@neb-sandhills.net.

R2R — R² Ranch

Past experience has shown me that some animals could make it on the land we have, while others would need a feed bag. Multiple droughts have enabled us to cull to a core herd of low-maintenance, highly-fertile cows. We have both a direction and a destination for our herd, informed by the Pharo Cattle Company philosophies. We feel blessed by the opportunity to work with PCC and the other Cooperative Producers. Richard Luciano 512-484-5522 or Sara Toussaint-Mesa 830-481-4043 or email Richard@R2Ranch.com.

Meet The Breeders

RRG — Rocking 3R Ranch

My wife Billie and our 3 kids live near Hillsboro, Texas. We use management intensive grazing practices and PCC genetics to help heal and get the best production out of our land here in central Texas. Getting to work with Pharo Cattle Company and its group of progressive thinkers has been a true pleasure. We run our operation mostly on leased ground but would love to show you around. Ian Gerrish, phone 903-590-6841 or email ianjg00@hotmail.com.

RSR — Rocking S Ranch

Rocking S Ranch is owned and operated by Nathan and Cheyanne Stevenson located south of Oakley, Kansas. Our goal is to raise cattle that are adapted to our environment, a low maintenance grass efficient herd with fleshing ability and calving ease. We want our cows to not only survive on grass alone, but to flourish without supplements. We run our cow herd on native Kansas grasslands through the summer and fall. We winter them on a variety of stalks, grassland, and stockpiled forages. Feel free to contact us any time, we'd love to visit with you. Nathan Stevenson, phone 785-953-7163 or email Natebradley@live.com.

SSCC — Seven Spades Cattle Company

Our cattle venture started back in 1987 with 15 cows purchased with all our savings and a low-interest ag loan. After several years of breeding conventional cattle with disappointing results, Dave had some key conversations with Kit Pharo. And those talks opened the doors to the genetics we needed to become successful. If you are ever in our area and want to take a look, please call us. We would enjoy talking cows and spending time with you. Dave and Donna Gwyn, phone 719-348-5437 or email sevenspadescattle@gmail.com.

T&T — T & T Cattle Company

T & T Cattle focuses on grass-based genetics that are moderate, fertile, functional, and efficient. Our cattle are low-input and perform well on grass with minimal supplementation. We emphasize "moderation in all things" and do not chase extremes. Our cattle exhibit great fleshing ability with an attractive phenotype and work well at high elevation. We run predominately registered Red Angus, but also have some Angus, SimAngus, and Hereford genetics. Bobby and Erica Thoman, phone 307-850-2129, www.lostwellscattle.com or email rthoman@wyoming.com.

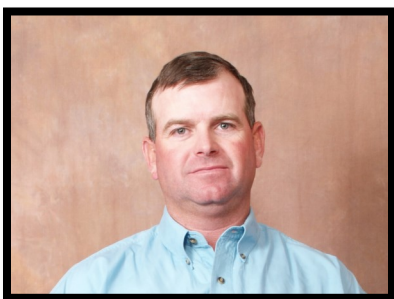

Meet The Breeders

TCH — Turner Creek Herd

In working with cattle, I like to remember wisdom from my Dad, such as, "You know son, the easiest way to get a cow to do what you want is to let her think it was her idea" and "If you can figure out what a cow is thinking, it will make this a lot easier." Another important philosophy I agree with comes from Pharo Cattle Company: "Raising cattle should be enjoyable *and* profitable." Eddy and Perri McMurtry, phone 806-256-2979 or email eddy@turnercreekherd.com.

TF — Toby Foland

I live in Wheatland, Wyoming and maintain a herd of efficient, moderate-framed Angus and Composite cows. I have been breeding my cows to Angus, Tarentaise, and Composite bulls from Pharo Cattle Company for many years. My goal is to produce efficient, easy-fleshing, good-natured cattle that optimize hybrid vigor and increase my profits. Calving in May and June has greatly reduced my input costs while shortening my calving season. Toby Foland, phone 307-331-1453 or email tjfoland68@gmail.com.

USA — USA Angus

Our family has been in the livestock business since 1846. Cattle are our heritage and embedded in our DNA. My maternal grandfather, Charles Datisman, joined the American Aberdeen-Angus Breeders' Association in 1917 and we are proud to follow in his footsteps. Raising cattle and calving in sync with nature while also creating vibrant healthy rangeland is our passion. We feel truly blessed to be caretakers of God's creation. Dave Christensen, phone 719-491-0429.

WCC — Walker Cattle Company

Weston Walker is an 8th generation Ozarkian livestock producer who owns and operates Walker Cattle Company. The Walker program focuses on producing well-adapted cattle that fit their environment, including temperature extremes, high humidity and endophyte-infected fescue. Rigorous selection and adherence to low inputs produces cattle that can excel anywhere in the country and be efficient and profitable. The WCC program produces Red Angus & Heat-Adapted Composites. Tours and phone calls welcome, contact Weston Walker, phone 417-777-0599 or email Weston@pharocattle.com.

I am not ashamed of the gospel, because it is the power of God for the salvation of everyone who believes.

Romans 1:16

Cowboy's Prayer

By Badger Clark

Oh Lord, I've never lived where churches grow.
I love creation better as it stood
That day You finished it so long ago
And looked upon your work and called it good.

I know that others find you in the light
That's sifted down through tinted window panes,
And yet I seem to feel You near tonight
In this dim, quiet starlight on the plains.

I thank you, Lord, that I am placed so well,
That you have made my freedom so complete;
That I'm no slave of whistle, clock or bell,
Nor weak-eyed prisoner of wall and street.

Just let me live my life as I've begun
And give me work that's open to the sky.
Make me a pardner of the wind and sun,
And I won't ask a life that's soft or high.

Let me be easy on the man that's down;
Let me be square and generous with all.
I'm careless sometimes Lord, when I'm in town,
But never let 'em say I'm mean or small.

Make me as big and open as the plains,
As honest as the hoss between my knees,
Clean as the wind that blows behind the rains;
Free as a hawk that circles down the breeze.

Forgive me, Lord, if sometimes I forget.
You know about the reasons that are hid.
You understand the things that gall and fret;
You know me better than my mother did.

Just keep an eye on all that's done and said
And right me, sometimes, when I turn aside,
And guide me on the long, dim trail ahead
That stretches upward toward the Great Divide.

DIRECT DEBIT AUTHORIZATION FORM

Date _____ Buyer (Print Name) _____

Business Name (if applicable) _____

City & State _____ Signature _____

I hereby authorize Pharo Cattle Company to direct debit my account based on information listed below.

This authorization can only be revoked by presenting a written request to Pharo Cattle Company.

Attach a voided copy of check here *OR*
supply Routing and Account information below.
